- Comparison of London with Other Cities
- About the Monitoring Data
 - Type of the monitoring sites
 - Siting criteria
 - Number of monitoring sites
- Summary

The Scope of the Report

The Scope of the Report

- A **global comparison** - air quality in London is compared with air quality in cities around the world, based on **monitored data**
- The global comparison goes beyond previous studies in terms of the breadth of cities considered, the number of pollutants included and use of recent data
- To make a **wide global comparison** (39 cities) using the available data, only **annual averages of pollution** (long term) have been used
- The ranking methodology developed could also be used to look at short term measures of pollutions for those cities with suitable data

The Ranking Method

The Ranking Method

- A **multi-pollutant weighted index of annual average concentrations**
- Concentrations are **normalised** with respect to an annual average value such as the EU limit value
- The index used has a pollutant mixture and weighting suitable for a mixture of traffic, industrial and fossil-fuelled heating sources
 - Citywide - general - NO_2 : 0.3; PM_{10} : 0.3; SO_2 :0.3; $\text{PM}_{2.5}$: 0.1;
- **Sensitivity tests** considered a weighting scheme suitable for cities with traffic as the dominant source and a weighting that reflects the relative health impacts of different pollutants:
 - Citywide/Traffic Focussed - NO_2 : 0.4; PM_{10} : 0.4; $\text{PM}_{2.5}$: 0.2;
 - Health Impacts - NO_2 : 0.02; SO_2 :0.03; PM_{10} : 0.71; $\text{PM}_{2.5}$: 0.24.

City Rankings

Citywide Index - Ranking

| City | Rank | City | Rank |
|---------------|-----------|----------------|------------|
| Vancouver | 1 (best) | Tokyo | 19 |
| Sydney | 2 | Warsaw | 20 |
| Stockholm | 3 | Rome | 21 |
| Vienna | 4 | Munich | 22 |
| Berlin | 5 | Sao Paulo | 23 |
| Amsterdam | 6 | Moscow | 24 |
| Chicago | 7 | Bucharest | 25 |
| Singapore | 8 | Stuttgart | 26 |
| Prague | 9 | Rio de Janeiro | 27 |
| Frankfurt | 10 | Milan | 28 |
| Brussels | 11 | Istanbul | 29 |
| Paris | 12 | Hong Kong | 30 |
| Budapest | 13 | Mexico city | 31 |
| Los Angeles | 14 | Jakarta | 32 |
| London | 15 | Mumbai | 33 |
| Barcelona | 16 | Shanghai | 34 |
| New York | 17 | Beijing | 35 |
| Madrid | 18 | Cairo | 36 (worst) |

Citywide/Traffic Focused Index - Ranking

| City | Rank | City | Rank |
|---------------|-----------|----------------|------------|
| Vancouver | 1 (best) | Barcelona | 19 |
| Sydney | 2 | Los Angeles | 20 |
| Singapore | 3 | Sao Paulo | 21 |
| Stockholm | 4 | Jakarta | 22 |
| Chicago | 5 | Munich | 23 |
| Vienna | 6 | Bucharest | 24 |
| New York | 7 | Rome | 25 |
| Prague | 8 | Stuttgart | 26 |
| Berlin | 9 | Tokyo | 27 |
| Amsterdam | 10 | Milan | 28 |
| Moscow | 11 | Rio de Janeiro | 29 |
| Madrid | 12 | Hong Kong | 30 |
| Frankfurt | 13 | Istanbul | 31 |
| Brussels | 14 | Shanghai | 32 |
| Budapest | 15 | Mexico city | 33 |
| Warsaw | 16 | Beijing | 34 |
| London | 17 | Cairo | 35 |
| Paris | 18 | Mumbai | 36 (Worst) |

Health Impacts Index - Ranking

| City | Rank | City | Rank |
|---------------|----------|----------------|------------|
| Vancouver | 1 (best) | Stuttgart | 19 |
| Sydney | 2 | Paris | 20 |
| New York | 3 | Rome | 21 |
| Stockholm | 4 | Budapest | 22 |
| Chicago | 5 | Sao Paulo | 23 |
| Madrid | 6 | Los Angeles | 24 |
| Tokyo | 7 | Warsaw | 25 |
| Frankfurt | 8 | Bucharest | 26 |
| London | 9 | Milan | 27 |
| Moscow | 10 | Hong Kong | 28 |
| Amsterdam | 11 | Mexico city | 29 |
| Prague | 12 | Istanbul | 30 |
| Vienna | 13 | Rio de Janeiro | 31 |
| Singapore | 14 | Jakarta | 32 |
| Munich | 15 | Shanghai | 33 |
| Berlin | 16 | Mumbai | 34 |
| Brussels | 17 | Beijing | 35 |
| Barcelona | 18 | Cairo | 36 (worst) |

Comparison of London with Other Cities

The world's most polluted cities (PM₁₀)

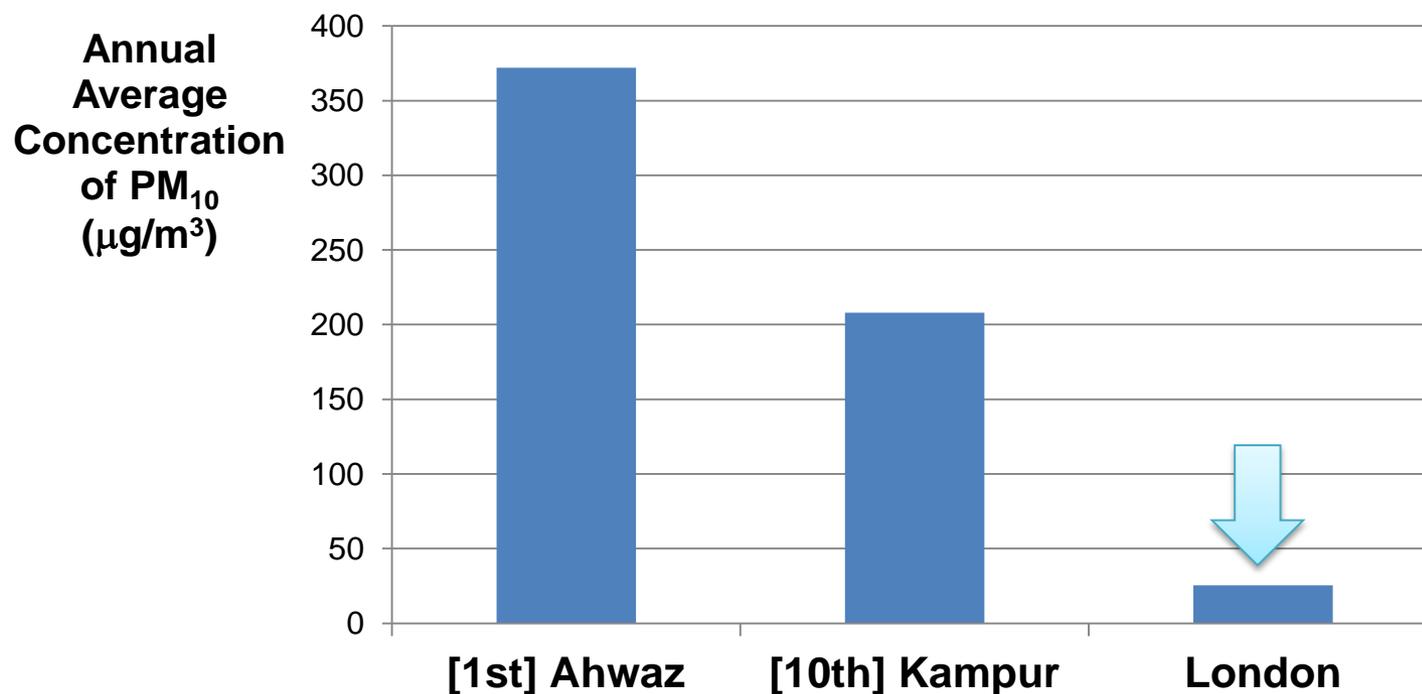

October 2013, Quartz using WHO data on PM₁₀

- 1. Ahwaz, Iran
- 2. Ulaanbaatar, Mongolia
- 3. Sanandaj, Iran
- 4. Ludhiana, India
- 5. Quetta, Pakistan
- 6. Kermanshah, Iran
- 7. Peshawar, Pakistan
- 8. Gaborone, Botswana
- 9. Yasouj, Iran
- 10. Kanpur, India

Comparison for PM₁₀

Average of 5 years annual averages (2008-2012)

| Non-EU City | PM ₁₀ (µg/m ³) |
|----------------|---------------------------------------|
| Cairo | 140 |
| Beijing | 122 |
| Mumbai | 103 |
| Shanghai | 81 |
| Mexico City | 56 |
| Rio de Janeiro | 55 |
| Jakarta | 53 |
| Istanbul | 53 |
| Hong Kong | 48 |
| Los Angeles | 39 |
| Sao Paulo | 37 |
| Singapore | 27 |
| London | 25 |

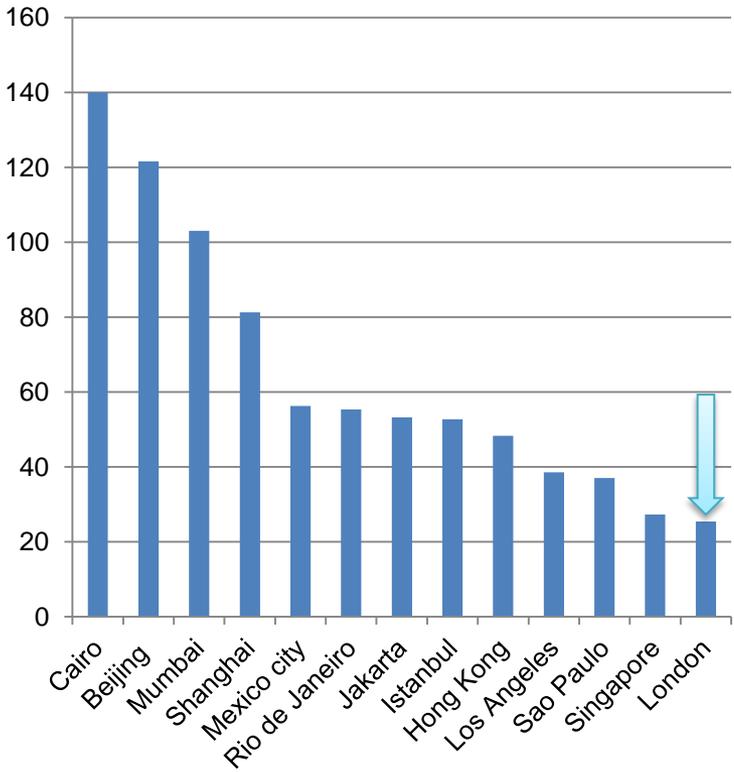

| EU City | PM ₁₀ (µg/m ³) |
|---------------|---------------------------------------|
| Milan | 44 |
| Bucharest | 40 |
| Warsaw | 36 |
| Budapest | 33 |
| Rome | 32 |
| Paris | 32 |
| Stuttgart | 30 |
| Barcelona | 30 |
| Brussels | 28 |
| Munich | 28 |
| Prague | 27 |
| Berlin | 27 |
| Vienna | 27 |
| Amsterdam | 26 |
| London | 25 |

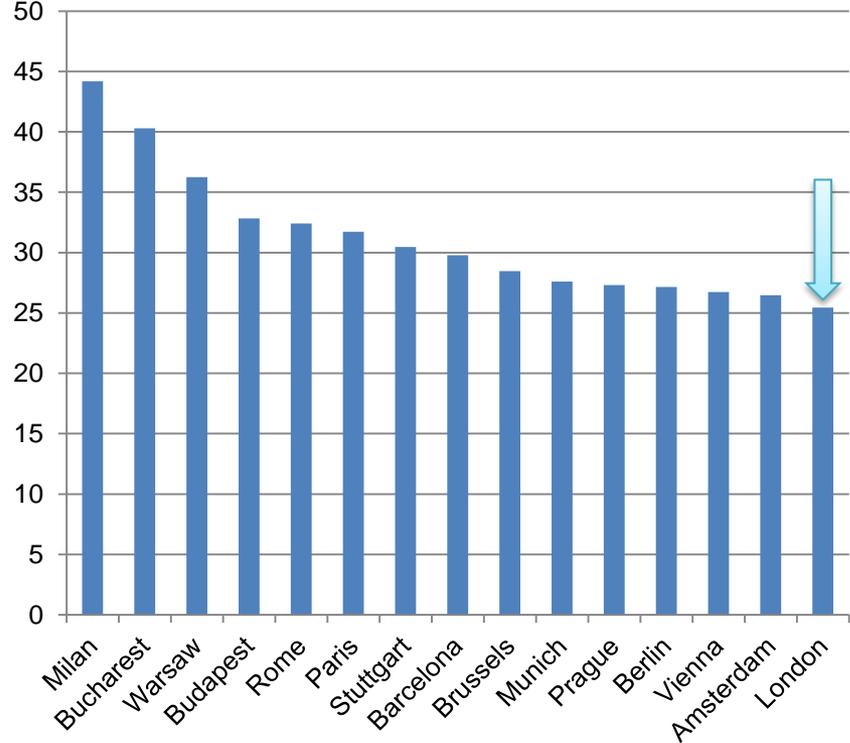

Comparison for PM₁₀

Average of 5 years annual averages (2008-2012)

Non-EU Cities, PM₁₀ (µg/m³)

EU Cities, PM₁₀ (µg/m³)

Comparison for PM_{2.5}

Average of 5 years annual averages (2008-2012)

| Non-EU City | PM _{2.5} (µg/m ³) |
|----------------|--|
| Cairo | 140 |
| Beijing | 122 |
| Mumbai | 103 |
| Shanghai | 81 |
| Mexico City | 56 |
| Rio de Janeiro | 55 |
| Jakarta | 53 |
| Istanbul | 53 |
| Hong Kong | 48 |
| Los Angeles | 39 |
| Sao Paulo | 37 |
| Singapore | 27 |
| London | 25 |

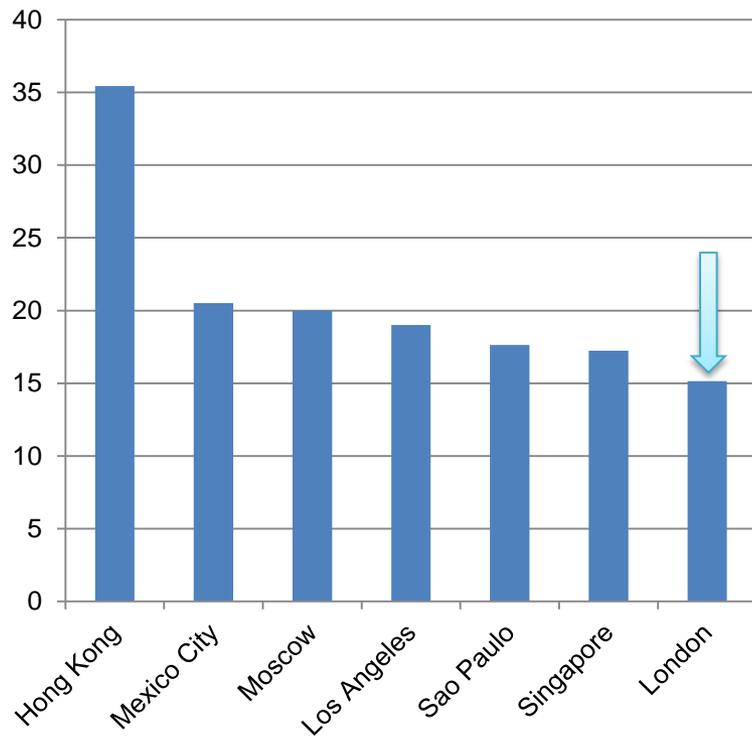

| EU City | PM _{2.5} (µg/m ³) |
|---------------|--|
| Milan | 44 |
| Bucharest | 40 |
| Warsaw | 36 |
| Budapest | 33 |
| Rome | 32 |
| Paris | 32 |
| Stuttgart | 30 |
| Barcelona | 30 |
| Brussels | 28 |
| Munich | 28 |
| Prague | 27 |
| Berlin | 27 |
| Vienna | 27 |
| Amsterdam | 26 |
| London | 25 |

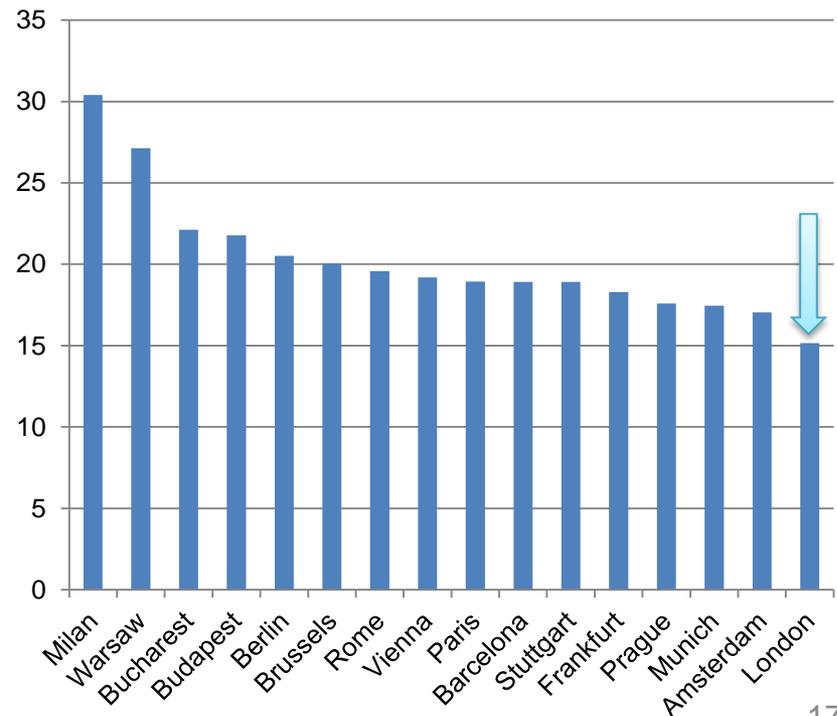

Comparison for PM_{2.5}

Average of 5 years annual averages (2008-2012)

Non-EU Cities, PM_{2.5} (µg/m³)

EU Cities, PM_{2.5} (µg/m³)

Comparison for SO₂

Average of 5 years annual averages (2008-2012)

| Non-EU City | SO ₂ (µg/m ³) |
|----------------|--------------------------------------|
| Jakarta | 52 |
| Shanghai | 38 |
| Beijing | 34 |
| Cairo | 31 |
| Hong Kong | 21 |
| Mumbai | 18 |
| Mexico City | 15 |
| New York | 12 |
| Singapore | 10 |
| Istanbul | 8 |
| Sao Paulo | 7 |
| Tokyo | 5 |
| Rio de Janeiro | 5 |
| Chicago | 5 |
| London | 4 |

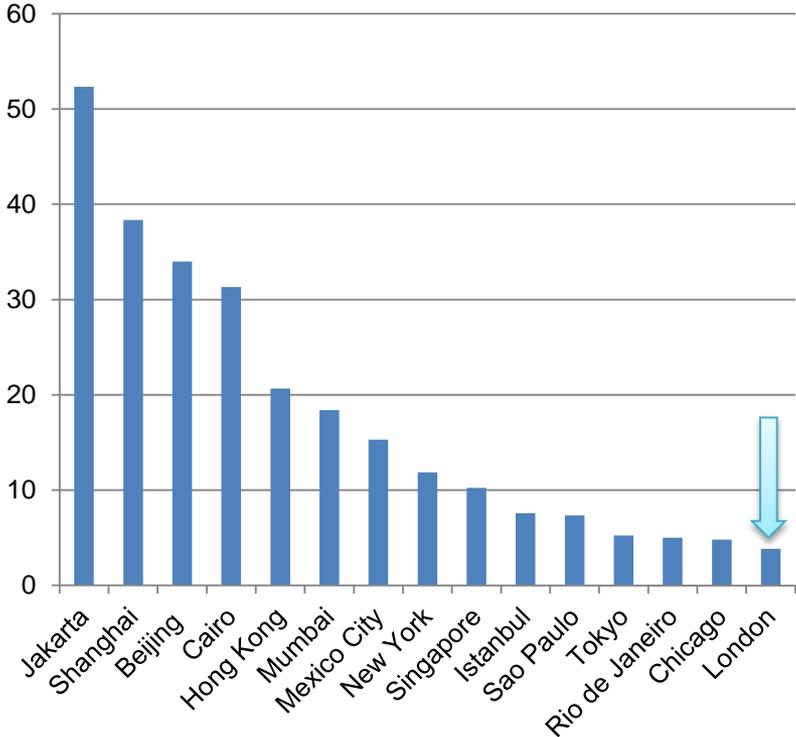

| EU City | SO ₂ (µg/m ³) |
|---------------|--------------------------------------|
| Bucharest | 10 |
| Madrid | 8 |
| Warsaw | 7 |
| Budapest | 6 |
| Munich | 5 |
| Prague | 4 |
| Brussels | 4 |
| London | 4 |

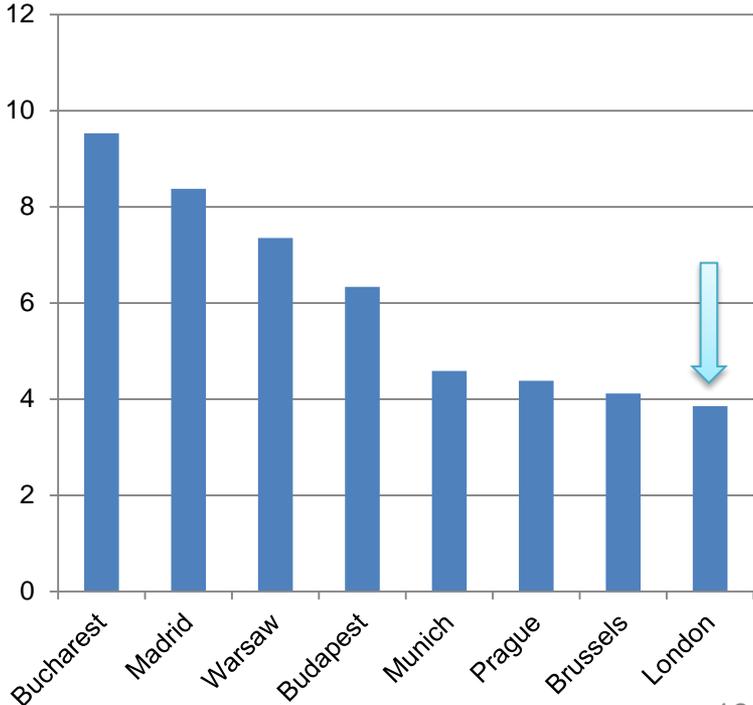

Comparison for SO₂

Average of 5 years annual averages (2008-2012)

Non-EU Cities, SO₂ (µg/m³)

EU Cities, SO₂ (µg/m³)

About the Air Quality Limits

Limits for annual average NO₂ across the world

- EU: **40** μg/m³
- US: **101** μg/m³ (53ppb)
<http://www.epa.gov/air/criteria.html>
- Chinese API based on daily averages
 - Excellent: up to **80** μg/m³
 - Good: **81-120** μg/m³

<http://www.mep.gov.cn/>

Comparison for NO₂

Average of 5 years annual averages (2008-2012)

| Non-EU City | NO ₂ (µg/m ³) |
|---------------|--------------------------------------|
| Mexico City | 103 |
| Hong Kong | 69 |
| Istanbul | 66 |
| Beijing | 53 |
| Shanghai | 53 |
| London | 52 |

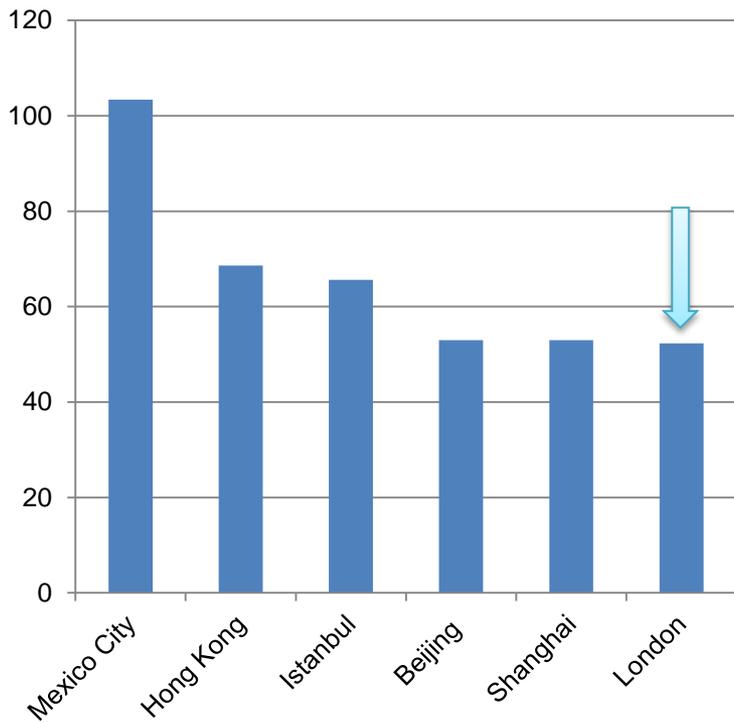

| EU City | NO ₂ (µg/m ³) |
|---------------|--------------------------------------|
| Stuttgart | 71 |
| Milan | 60 |
| Munich | 56 |
| London | 52 |

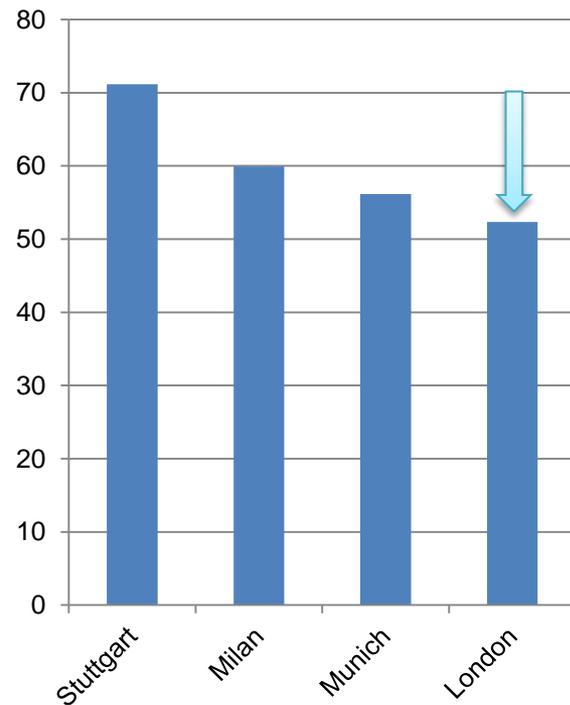

Comparison for NO₂

Average of 5 years annual averages (2008-2012)

Non-EU Cities, NO₂ (µg/m³)

EU Cities, NO₂ (µg/m³)

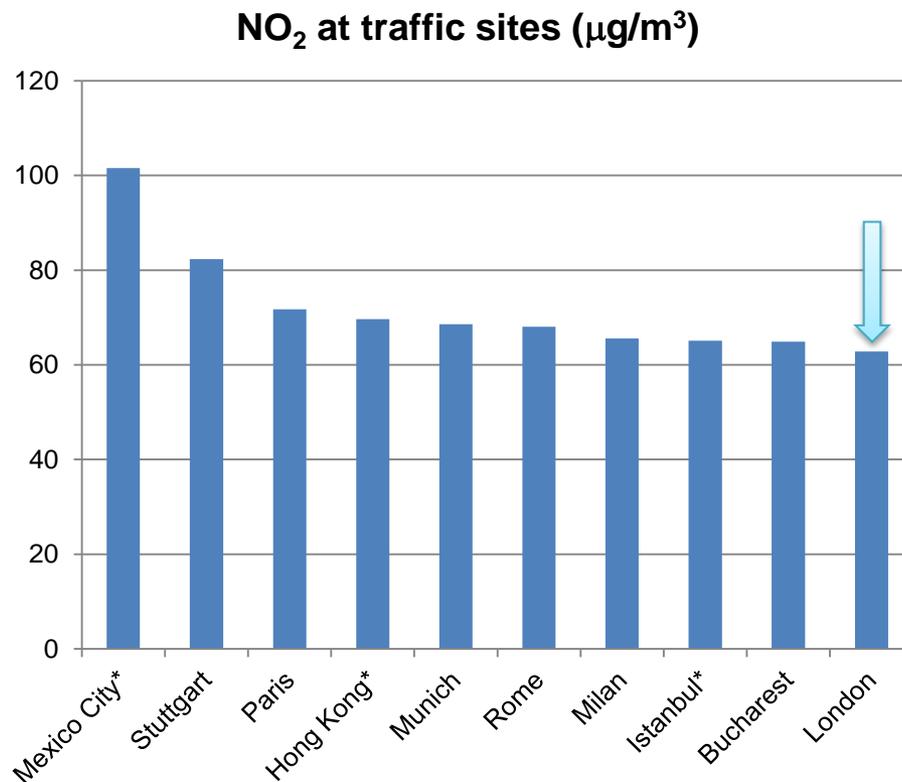

Comparison of London with traffic sites only

Average of 5 years annual averages (2008-2012)

| EU City | NO ₂ (µg/m ³) |
|---------------|--------------------------------------|
| Mexico City* | 102 |
| Stuttgart | 82 |
| Paris | 72 |
| Hong Kong* | 70 |
| Munich | 69 |
| Rome | 68 |
| Milan | 66 |
| Istanbul* | 65 |
| Bucharest | 65 |
| London | 63 |

*all monitoring stations, not just traffic sites

About the Monitoring Data

About the Monitoring Data: Type

- Monitoring sites can be classified as: Traffic/ Urban Background/Suburban/Rural/Industrial
- **Classifications can vary**, in some cities traffic monitoring sites are at least 10m from the kerb
- Not all countries/cities report the type of the monitoring sites
- Amongst cities reporting site type, London has a high proportion of traffic sites, as do Brussels, Milan, Munich and Stuttgart (but London has by far the greatest number of sites)

About the Monitoring Data: Siting Requirements

- **EU Directive – European Cities Monitoring Programmes**
 - Responsibility of the Member State
 - Purpose is for judging compliance – sites must be representative
- **UK Local Air Quality Management (LAQM)**
 - Responsibility of local government
 - Purpose – can vary, may investigate **hot spots**

About the Monitoring Data: Siting Requirements

- **EU Directive – European Cities Monitoring Programmes**
 - “*Sampling points shall in general be sited in such a way as to avoid measuring very small micro-environments in their immediate vicinity, which means that a sampling point must be sited in such a way that the air sampled is **representative of air quality for a street segment no less than 100 m length** at traffic-orientated sites*”;
 - “*The inlet probe shall not be positioned in the immediate vicinity of sources in order to avoid the direct intake of emissions unmixed with ambient air*”.
- **UK Local Air Quality Management (LAQM)**
 - “*The site should not be close to local or point emissions sources, unless these have been specifically targeted for investigation*”;
 - “*Try to site the monitors as **near to the point of public exposure as possible***”.

About the Monitoring Data: Number of Sites

- London has a very large number of automatic monitoring sites: 157
- By comparison, Paris has 32 year-round sites
- In EU cities, there tend to be few monitoring sites other than the official sites for EU reporting – except in London
- In London there are 17 official sites for EU reporting, the remainder (139) have been located by local government
- London has almost 2 monitoring stations per 100,000 habitants, bettered only by Amsterdam and Vancouver
- London has 1 monitoring site per 0.1km², bettered only by Barcelona, Brussels and Vancouver

Considering individual sites reported to the EU for compliance

- In 2010 the highest NO₂ concentration was recorded in Florence, followed by a site in Stuttgart, then Munich, then Marylebone Road in London
- In 2011, the sites in Florence and Stuttgart recorded higher concentrations than Marylebone Road.
- In 2013, one site in Paris recorded higher concentrations than Marylebone Road

*Concentrations at Marylebone Road have fallen each year from 2009:
107.0 $\mu\text{g}/\text{m}^3$ >> 98.3 $\mu\text{g}/\text{m}^3$ >> 97.2 $\mu\text{g}/\text{m}^3$ >> 94.0 $\mu\text{g}/\text{m}^3$ >> 80.6 $\mu\text{g}/\text{m}^3$*

Summary

Summary

- It is alleged that London has the worst air quality in the world
 - This is to ignore the many cities with exceedingly high levels of particulate pollution
 - Considering the pollutants of concern in the EU, London has low levels of PM_{10} , $PM_{2.5}$ and SO_2
 - On a citywide basis the NO_2 concentration in London is lower than that in Stuttgart, Milan and Munich (and cities outside the EU)
 - Considering traffic sites only, the NO_2 concentration in London is lower than that in Stuttgart, Paris, Munich, Rome, Milan, Bucharest (and cities outside the EU).
 - London has many more automatic monitoring sites than other EU cities with high quality data and easy, transparent access
 - Many of the monitoring sites have been sited by local government investigating hot spots rather than by Member States looking for representative locations. Note that in some (non-EU) cities traffic sites are at least 10m from the kerb.
