London Assembly Transport Committee – Pedestrian Safety 9 January 2014

1. Introduction

TfL welcomes the opportunity to provide the London Assembly Transport Committee with an overview of the steps being taken to improve pedestrian safety in London. The Committee has requested information ahead of the meeting on 9 January, which is included in this report and the accompanying appendices where appropriate.

Summary of Key Points:

- The safety of London's roads has been improving steadily since 2000:
- In June 2013, Safe Streets for London: The Road Safety Action Plan for London 2020 was published. Good progress is being made on moving the plan forward;
- In 2014, the first Pedestrian Safety Action Plan will be published;
- Pedestrian safety continues to be a priority for TfL and we are investing in improving safety and the environment for pedestrians across the business.

1.2 Overview of pedestrian road safety in London

The Mayor's Transport Strategy highlights the Mayor's commitment to improving road safety in London. The Mayor has set a target to reduce the number of people killed or seriously injured on London's roads by 40 per cent by 2020, compared to a baseline of 2005-09. This equates to a reduction of 10,000 casualties over this period.

The safety of London's roads has steadily improved since TfL's formation in 2000, with the number of people injured having decreased by more than a third, and deaths and serious injuries have more than halved. Serious collisions and fatalities involving children have reduced by around 70%.

Walking accounts for 21 per cent of daily journeys in London, with 6.43 million trips made a day, but 35 per cent of the total number of Killed and Seriously Injured (KSI) casualties in 2012. As with most modes, pedestrian KSIs have declined and were 8 per cent lower in 2012, when compared to the 2005-2009 average. However, pedestrians remain over-represented in casualty figures and 2012 saw a 17 per cent increase in pedestrian serious casualties compared to the previous year, which shows that more work needs to be done to improve the safety of pedestrians in London. This single year on year increase needs to be seen in the context of the longer term downward trend in casualties in London and early provisional results for 2013 suggest that, compared with 2012, there have been declines in collisions and casualties among pedestrians. Full information on this will be made available when the data is finalised in early 2014.

Working with the London boroughs, we are therefore taking proactive steps to address further the safety of pedestrians in the capital. Safe Streets for London: the Road Safety Action Plan for London (SSfL) was published in June 2013, and an action plan specifically focused on pedestrian safety is due to be published in Spring 2014.

We are investing a significant amount of money to improve conditions for pedestrians across the city through a wide range of projects and programmes working with both the public and private sectors. Major schemes to improve the public realm in locations such as Elephant & Castle, Tottenham Hale and Vauxhall Nine Elms will see noticeable improvements in conditions for walking and also pedestrian safety. Many major schemes being developed by the boroughs are partially funded through Local Implementation Plan funding and have at heart improvements for pedestrians, such as Twickenham Town Centre and the Oxford Circus Diagonal Crossing which saw improved facilities in one of London's busiest locations for pedestrians.

We have also been undertaking ground-breaking analysis to further our understanding of the level of risk experienced by road users in London. This analysis has helped to inform and determine the actions in SSfL and will continue to be influential in the ongoing delivery of the plan through reducing risk on London's roads. We know from this analysis that being a pedestrian in London carries a relative low risk, but due to the very high number of daily trips and the fact that we want to encourage even more people to walk, we need to ensure that we are doing everything we can to ensure the safety of pedestrians.

We have been looking at risk in a number of different ways, for example by looking at age and sex. This Analysis of risk can also look at how levels of risk change depending on a number of factors. For example, the highest risk pedestrian group are pedestrians aged over 75. Children are at high risk by comparison to other pedestrians, and also account for moderately high casualty numbers, particularly in the 12-19 age group. The age group with most pedestrian casualties (and moderate levels of risk) is 20-29. This specific information can help to inform how best to target interventions to improve safety, for example through targeted marketing campaigns or a specific infrastructure improvement.

1.3 Safe Streets for London: A Road Safety Action Plan for London 2020

Safe Streets for London sets out 56 actions that will help achieve the Mayor's target of reducing KSIs by 40 per cent by 2020. Building on the success achieved to date, SSfL will focus on delivering safe roads, safe vehicles and safe people by working in partnership with a wide variety of agencies and organisations both nationally and at a London and local level. Actions will address the safety of all road users including pedestrians, cyclists, motorcyclists and motorists. SSfL will support work across TfL,

the delivery of the Mayor's Vision for Cycling and the outcomes of the Roads Task Force and TfL's subsequent response.

A key commitment in SSfL is the delivery of individual safety action plans for all vulnerable road user groups. The Motorcycle Safety Action Plan, Pedestrian Safety Action Plan and the revised Cycle Safety Action Plan will all be published in 2014. Each will draw from SSfL and include specific actions aimed at raising the standards of safety in London for each road user group.

A further outcome of SSfL has been the creation of the Road Safety Steering Group (RSSG) which is attended by a range of stakeholders from TfL, the GLA and other external organisations and is chaired by the Deputy Mayor for Transport. The aim of the steering group is to promote the safety of all road users in London and support the achievement of the Mayor's casualty reduction target through SSfL. A full membership list for the RSSG can be found in **Appendix A.**

We lead the road safety agenda in London, driving up standards through more training, road safety auditing, marketing campaigns and investment. Over the past 12 months alone, we have run road safety campaigns aimed at older pedestrians and teenagers aged 11-14. Over 75,000 pre-school age school children are enrolled in the Children's Traffic Club programme, 32 of the 33 boroughs are promoting and/or taking part in the Junior Road Safety Officer (JRSO) or Junior Travel Ambassador (JTA) schemes. Just over 200 schools are now signed up to JTA with a further 100 due to join in the Spring. In addition, over 200 schools take part in JRSO at present.

Further, we have been supporting the Metropolitan Police Service with Operation Safeway, which has seen 2,500 officers enforcing against anti-social road user behaviour at key junctions across London, to improve all road users safety and to date over 10,000 Fixed Penalty Notices have been issued.

We have been actively engaged with the London Borough of Islington and City of London to support the implementation of borough wide 20mph speed limits. Our work with the freight industry aims to improve the operation and design of Heavy Goods Vehicles (HGVs) and we are actively engaged in lobbying the Department for Transport (DfT) and European Commission (EC) for improved safety standards and regulations for HGVs.

To date there have been 129 sites where pedestrian countdown technology has been installed and 200 pedestrian countdown sites will have been installed by the end of March 2014. In January 2014, TfL will also host the annual road safety conference. This will be themed around road safety and public health and senior borough officers have been invited to attend.

- 2. Overview of current and future actions to improve pedestrian safety in London
- 2.1 A brief summary of progress in meeting the key outcomes for pedestrians listed in the Mayor's *Safe Streets for London: Road Safety Action Plan for London 2020:*

1) A 'critical list' of junctions and locations on the Transport for London Road network (TLRN) and borough roads that require improvement

Good progress has been made on action one of SSfL which commits us to identifying a 'critical list' of locations on the TLRN and to begin improvements within 12 months of identification. The 'critical list' of links and nodes is a sub-set of the Road Safety Priority Lists which are published annually, and are used to identify locations where there are road safety issues on the TLRN that need further investigation, to see whether engineering measures can be implemented to resolve these issues. The 'critical list' is a list of locations where there are no previously existing plans for safety improvements, but where there is a clear safety issue.

To date, 34 links and nodes have been identified and clustered into 26 schemes. Our Traffic Design Engineering team have now started to undertake studies into these, and the first three commenced in October 2013. These are due to finish at the end of April 2014. Following this they will be subject to internal review and those that realise the greatest overall benefits will be progressed to design and build stage.

We have extended this approach to borough roads, to enable boroughs to take forward evidence-led road safety engineering, in line with the vulnerable road user focus of SSfL; this will provide information to help the boroughs direct their LIP funding towards locations where they are likely to achieve the greatest KSI collision reductions.

2) The production of a targeted Pedestrian Safety Action Plan.

The Pedestrian Safety Action (PSAP) is due for publication in spring 2014 and sets out a series of actions to address key safety issues for pedestrians. Many of these actions will build on work that is already underway such as the introduction of 20mph zones across many parts of London, the introduction of Pedestrian Countdown at Traffic Signals (PCaTS), improving the design and operation of Large Goods Vehicles and the development of further behaviour change campaigns aimed at key pedestrian groups. The actions have been built upon and added to following consultation with the Pedestrian Safety Working Group (PSWG). The resulting set of actions in the PSAP will represent those that TfL and the PSWG consider to be the priority actions for improving pedestrian safety in London.

The PSWG was established during the development of SSfL to inform the development of the Plan. The PSWG membership comprises a range of stakeholders including boroughs, emergency services and police, academics,

businesses, technical experts, transport forums, local and national representative groups, as well as walking and accessibility groups. The PSWG has been closely involved throughout the development of the PSAP.

A key area of focus for the PSAP is improving the safety of Heavy Goods Vehicles (HGVs) and reducing the risk they pose to pedestrians. TfL has been engaging with the freight industry over a number of years, working with them to improve vehicle operation and design. We have also been actively engaging with the DfT and EC to push for changes in regulation to improve vehicle safety. In 2010, TfL developed the Safe London Driving driver CPC training module for (HGV) drivers, which focuses on improving awareness of vulnerable road users and to date over 4,500 drivers have been trained. TfL supports boroughs to run these courses along the Barclays Cycle Superhighways.

We have been working closely with the construction logistics industry and with enforcement and regulatory bodies to create a step change in the way road safety is managed in the industry by improving vehicle safety through the design and manufacture of safer vehicles and the retrofitting of safety equipment to existing vehicles. The aim is to ensure that road safety is considered to be as important as health and safety on site and to encourage the adoption of best practice across the industry. Over 45 organisations have been working together towards these goals and progress has already been made, including the development of national common standards for use by the construction and logistics industry to improve safety through better managing vehicles, drivers, operations and construction sites. On 9 December the Mayor launched the new set of safety standards for HGVs at a City Hall event for the freight industry, full details of which can be found here: tfl.gov.uk/wrrrstandards

We are also currently investigating the potential to introduce a new "Safer Lorry Scheme" to tackle HGVs that are not fitted with basic safety equipment to protect vulnerable road users. This will be consulted upon in 2014.

In addition, in September 2013, the Mayor and Stephen Hammond MP, Parliamentary Under Secretary of State for Transport, also announced a joint TfL/DfT Industrial HGV Task Force, which is made up of additional police officers and staff from the Vehicle Operator Services Agency, to enforce the regulations for construction HGVs. The DfT will also undertake a review of national exemptions which continue to allow some vehicles to operate without sideguards. We are pleased to say that the Task Force has already started its operations and has been enforcing against dangerous and illegal HGVs operating in London.

London Buses also have a range of safety initiatives underway to raise awareness of pedestrian safety amongst drivers including the provision of training materials to drivers and working with bus operators to ensure driver training is carried out frequently and that it contains the most up to date content. We have also been working to ensure that the route risk assessment process accurately captures

vulnerable user risk, and that this takes into account any routes that have a high occurrence of pedestrian KSIs resulting from bus collisions.

2.2 A brief summary of progress in analysing coroners and other accident reports into pedestrian incidents to improve understanding of the causes of pedestrian casualties.

In July 2012, TfL published the report 'Analysis of police collision files for pedestrian fatalities in London 2006-10'. The research was undertaken by Transport Research Laboratory and analysed around 200 police fatal files where a pedestrian was killed, with the overall aim of providing a better understanding of how fatal pedestrian collisions could be prevented. The full report is available on TfL's website:

http://www.tfl.gov.uk/assets/downloads/corporate/pedestrian-fatalities-in-london.pdf.

The study found that:

- 90 per cent of collisions occurred on a road with a speed limit of 30mph or lower;
- 33 per cent of pedestrians involved in fatal collisions were over 70;
- 24 per cent were impaired by alcohol or drugs;
- 56 per cent were struck by a car;
- 17 per cent by a bus or coach;
- 14 per cent by an HGV;
- 25 per cent of pedestrians were crossing at a designated facility at the time of the collision and 19 per cent were crossing within 50m of a facility;
- 15 of the 27 HGVs involved in fatal pedestrian collisions were moving off when they struck the pedestrian;
- 35 per cent of all drivers were convicted, most commonly for careless driving.

The outcomes from this report have gone on to inform a number of interventions, including the development of the latest pedestrian safety campaign aimed at older pedestrians, a key group identified in the report. It has also informed the development of the PSAP. In addition to this research, we undertake a range of other studies and analysis into pedestrian casualties and road safety more generally. These documents can be found on TfL's website: www.tfl.gov.uk/roadsafety.

Data collected on pedestrian casualties inform the Road Safety Priority Lists for the TLRN. Casualty data is also available to London's boroughs, communities and the general public. These documents can be found on our website: www.tfl.gov.uk/roadsafety.

2.3 A breakdown of pedestrian KSIs for 2010, 2011 and 2012 where an HGV/construction vehicle was involved, indicating whether the incident took place at a pedestrian crossing.

Collisions involving an HGV where a pedestrian was killed or seriously injured, by pedestrian crossing facility detail, in Greater London - 2010 to 2012

		No. collis		
Crossing Type	2010	2011	2012	Sum
No crossing facility within 50m	7	5	15	27
Zebra crossing	2	1	1	4
Pelican crossing or similar	5	3	3	11
Pedestrian phase at Automatic Traffic Signals	3	7	2	12
Central Refuge	0	0	1	1
Sum	17	16	22	55

2.4 A breakdown of pedestrian KSIs for 2010, 2011 and 2012 where an bus or coach was involved, indicating whether the incident took place at a pedestrian crossing.

Collisions involving a bus or coach where a pedestrian was killed or seriously injured, by pedestrian crossing facility detail, in Greater London - 2010 to 2012

		No. collis		
Crossing Type	2010	2011	2012	Sum
No crossing facility within 50m	37	48	40	125
Zebra crossing	4	10	5	19
Pelican crossing or similar	13	12	13	38
Pedestrian phase at Automatic Traffic Signals	25	24	28	77
Central Refuge	0	0	1	1
Sum	79	94	87	260

2.5 Pedestrian collision hotspots for 2010, 2011 and 2012 indicating whether they occur on TLRN or borough roads

The table below shows junctions in London ranked by the number of collisions involving injury to a pedestrian between 2010 and 2012.

Top 24 nodes - based on pedestrian collisions (2010-2012)

Rank	Borough	Description	Highway Authority	Collisions involving injury to a pedestrian
		Cambridge Circus (Shaftesbury		
1	Westminster	Avenue/Charing Cross Road)	Borough	14
		Oxford Street/Regent Street		
1	Westminster	(Oxford Circus)	Borough	14
		Camden High Street/Parkway (Lte		
3	Camden	Station)	TLRN	13
3	Haringey	High Road (N22)/Turnpike Lane	Borough	13
		Brixton Road/Stockwell		
3	Lambeth	Road/Gresham Road	TLRN	13
3	Haringey	High Road (N22)/Lordship Lane	Borough	13
3	Westminster	Oxford Street/Holles Street	Borough	13

16	Westminster	Street	Borough	10
16	Westminster	Oxford Street/New Bond Street	Borough	10

2.6 An update on the amount of guard railing removed to date on the TLRN and future plans for any further removal.

In pursuance of the Mayors Transport Strategy objective to de-clutter our streets, we have to date removed 83km of pedestrian guard rail from the TLRN and current projections, dependant on the outcome of site specific reviews, are that it may ultimately be possible to remove between 110 and 120km. During the current year we have reviewed 15.4km and of that determined that 12km could be removed. The objective of the programme is to remove unnecessary footway clutter without impact on pedestrian safety or road casualty statistics.

3.Pedestrian crossings

3.1 A breakdown of pedestrian KSIs for 2010, 2011 and 2012 indicating whether they took place on a pedestrian crossing, the type of crossing (Zebra, puffin, pelican, toucan) and whether or not Pedestrian Countdown was installed at the site.*

Collisions where a pedestrian was killed or seriously injured, by pedestrian crossing facility detail, in Greater London - 2010 to 2012

		No. of collision	ns	
Crossing Type	2010	2011	2012	Sum
No crossing facility within 50m	496	546	607	1,649
Zebra crossing	113	121	115	349
Pelican crossing or similar	87	108	127	322
Pedestrian phase at Automatic Traffic Signals	185	185	250	620
Footbridge or Subway	1	4	4	9
Central Refuge	23	8	10	41
Sum	905	972	1,113	2,990

^{*} NB - Stats 19 Data does not include whether or not a crossing has Pedestrian Countdown installed.

3.2 A list of pedestrian crossings where pedestrian green man time has been reduced since 2010.

Historically, TfL used a green man time that was longer than the Department for Transport's (DfT) national minimum standard for crossings, which is six seconds. This was found to be longer than the majority of pedestrians required at the majority of crossing locations within London to establish themselves on the crossing. It was therefore reduced to conform with the DfT standard for the rest of the UK.

As the Highway Code describes, the green man is only the invitation to cross, not the full crossing time. It is intended to allow sufficient time for pedestrians to establish themselves on the crossing. Once established on the crossing, the full crossing time

is provided by the ensuing "blackout period" where no pedestrian symbol is illuminated. Thereby the total crossing time is much longer than the six seconds.

However, our signal engineers do design each crossing on the basis of individual assessment, so where the location and circumstances dictate, such as at locations with very heavy pedestrian demand, this green man time is extended to allow greater numbers of pedestrians to establish themselves on the crossing.

Working with the DfT and Highways Agency, we have adopted Pedestrian Countdown at traffic signals which provide pedestrians with further information on the remaining time they have to cross. The provision of this improved information has been found to allow pedestrians to make better informed decisions when crossing and supports the move to the green man minimum of 6 seconds.

For a full list of locations at which the amount of green man time has been reduced in line with National Guidelines since 2010 please see **accompanying Appendix B**.

3.3 A list of pedestrian crossings which do not have either audio or tactile cones fitted for visually-impaired people.

In the Mayor's "Your Accessible Transport Network" document published in December 2012 the Mayor committed to upgrading: "...the remaining 276 (or six per cent of) signalised pedestrian crossings in London to include rotating cones and/or audible signals and tactile paving" by spring 2016.

As of June 2013, 22 of these remaining 276 sites had been upgraded, leaving a further 254 sites remaining for upgrade. These upgrades will be achieved, where possible, by combining works with other signal schemes, or other planned works, to maximise efficiency of delivery.

Where works cannot be combined, a programme has been identified to ensure all remaining sites which are not subject to other schemes will be completed to meet the spring 2016 commitment. Section 3.7 outlines the timetable for delivering these remaining sites.

For a full list of pedestrian crossings which do not have either audio or tactile cones fitted, please see **accompanying Appendix C**.

3.4 A list of pedestrian crossings which have been removed since 2010.

Pedestrian crossings are only removed after consultation and agreement with the relevant borough and the local community and, in many cases, requests for removal originate from the boroughs themselves.

In principle, removal of signals saves energy and cost which, providing there is adequate alternative crossing provision, is a positive action. Typical scenarios for crossing removal are when an area experiences urban renewal and pedestrian crossing demand patterns change, rationalisation of crossings along a section of road (e.g. replacing three signals in a short section of road with two), replacement of seldom-used crossings with Zebra crossings, or if traffic patterns have changed meaning an informal crossing is then found to be safe and readily possible.

For the full list of pedestrian crossings removed in Greater London since 2010 please see **accompanying Appendix D**.

3.5 A list of pedestrian crossings that are currently scheduled for removal

Removal of Pedestrian Crossings (all promoted by the relevant Borough)

- Rotherhithe New Road / Hawkstone Road / Abbeyfield Road Planned January 2014;
- Union Road Larkhall Lane Larkhall Rise Planned January 2014;
- The Broadway Southall by Saxon Road By Oswald Road Planned March 2014;
- The Broadway Southall by Alexandra Avenue by Northcote Avenue Planned March 2014;
- The Broadway Southall by Alexandra Avenue by St Georges Avenue by Hebbert Road – Planned March 2014;
- A105 High Road Woodgreen by Coleraine Road Planned next financial year;
- The Broadway by Bedford Road by Uxbridge Road Planned next financial vear:
- Broadway by Green Man Lane by Leeland Terrace Planned next financial year.

3.6 An update on the progress of pedestrian SCOOT trials

In early 2013 Pedestrian SCOOT Phase One was tested as a proof of concept at the Blackfriars Road/The Cut junction. When large numbers of pedestrians were waiting on the kerb three seconds before the pedestrian green man invitation to cross was due to appear, the sensors successfully detected the numbers or density of pedestrians waiting and the system increased the length of time the green man invitation to cross was displayed by one, two or three seconds. We learnt from the proof of concept that significant further development was required including SCOOT and UTC system software and a Phase Two trial was scoped.

Pedestrian SCOOT Phase Two is implementing two further site trials on the A24 Balham High Road, at the junctions of Upper Tooting Road and Chestnut Grove. Development is underway and equipment installation is commencing in early spring 2014. This staged trial is testing the capability of new pedestrian sensors, modern

communications hardware and UTC SCOOT software to develop the capability for use at other sites in London where there is significant pedestrian demand.

3.7 Timetable for completing audio/tactile updates to traffic crossings in Greater London.

As discussed in section 3.3, 254 sites were identified for audio/tactile upgrades and are included in programmes for completion by spring 2016.

The timetable for delivering tactile/audible crossings is as follows:

Year	Number of sites
2013/14	68
2014/15	81
2015/16	105
Total complete by Spring 2016	254

Progress in delivering this programme to the end of 2013 has resulted in 211 sites remaining to be upgraded as of this date.

4. Planned expenditure on actions to improve walking

4.1 A breakdown of the December 2012 TfL Business Plan expenditure on road safety of £250m. Also, for purposes of comparison, a breakdown of the previous planned expenditure of £106m^[1]. This should be split between capital and revenue costs and by programme. For revenue expenditure, where possible please separate out programme expenditure for walking and the promotion of walking.

The £250m allocation for road safety in our Business Plan is only part of the investment into improving the environment and safety for pedestrians. Funding from a range of budgets is invested into schemes that also benefit pedestrians. For example the £100m dedicated to the Better Junctions programme over the course of the Business Plan will deliver major improvements at key junctions across London that will improve safety for pedestrians. Our funding for education and training for HGV drivers also has a significant benefit for pedestrians by raising awareness among drivers of the hazards faced by vulnerable road users.

Please see accompanying Appendix E

^[1] http://www.tfl.gov.uk/assets/downloads/corporate/Part-1-Item12-Safety-Camera-Replacement-Project.pdf

4.2 An update on progress towards the target of 22 boroughs having either completed or be progressing a Key Walking Route scheme by 2013/14^[2]

In 2011, we stated that it had a target of 22 boroughs having either completed, or to be progressing, a Key Walking Route (KWR) scheme by 2013/14. We also listed some examples to illustrate the coverage of KWR development across London.

Under 'LIP 1', with a dedicated LIP Walking programme and budget, we could prioritise the delivery of KWRs, which led to significant numbers of KWRs being delivered through financial years up to 2009/10. However, despite the removal of the dedicated LIP walking budget in 2010/11 with the switch to 'LIP 2' (consolidated budgets and greater borough freedom), boroughs have continued to implement KWR type schemes.

26 boroughs (please **Appendix F** for a full list) have either delivered, or are in the process of delivering, schemes that embrace the core principles of key walking routes (including features such as widened footways, new and improved pedestrian crossings on desire lines, seating, street lighting for pedestrians, signing etc). This means we have not only met our target of 22 boroughs having completed, or to be progressing, a KWR by 2013/14, but have exceeded it by an additional four boroughs.

4.3 An update on TfL scoping work into the development of walking incentive schemes^[3]

Since we last updated the Transport Committee on walking incentives, we developed a mobile app with the company Recycle Bank. The app, called ReRoute, tracked cycling and walking journeys via user mobile phone GPS technology. Miles were logged and could be redeemed for rewards, such as store vouchers or discounted food and beverages. This was unfortunately found to be commercially unviable, largely due to a lack of take-up from potential users. We are currently exploring the market for new opportunities to develop walking promotion and incentive schemes with a commercial partner who would be able to make a cycling and/or walking incentive scheme commercially viable without significant investment from TfL.

5. Conclusions

Pedestrian safety in London continues to improve, and the risk of being involved in a collision as a pedestrian remains relative low. However, with the sheer number of

רכז

[3] Ibid.

pedestrians moving around London on a daily basis there is no room for complacency and pedestrian safety remains a high priority for us. SSfL, and the soon to be published PSAP, demonstrate this commitment and we will continue to work with our partners through the PSWG and with colleagues across London's boroughs to ensure pedestrian safety is improved and that London can truly become the world's most walkable and safest city for pedestrians.

Appendix A: Road Safety Steering Group Membership

#	Organisation	Name	Title	RSSG Role
1	Greater London Authority (GLA)	Ms Isabel Dedring	Deputy Mayor for Transport	Chair
2	Greater London Authority (GLA)	Ms Katherine McKinlay / Margaret Kalaugher	Policy Officer – Transport / Principal Policy Officer	Observer /Advisor
3	Transport for London (TfL)	Mr Ben Plowden	Director of Surface Planning	Deputy Chair
4	Transport for London (TfL)	Ms Lilli Matson	Head of Delivery Planning	Member

2012 Business Plan Funding for Road Safety vs Baseline Funding

Opex/Capex	Workstream	Baseline Funding	2012 Business Plan
	Safety Camera Maintenance and Enforcement	53	53
	Education & Training	22	49
Opex	Marketing and Research Campaigns	10	36
	Innovation/Evaluation	6	18
	Road Safety Engineering works on TLRN	3	9
	Enforcement Policing		5
Opex Total		94	171
Capex	Road Safety Engineering works on TLRN	12	38
	Safety Camera Infrastructure		42
Capex Total		12	80
Grand Total		106	250

The £250m allocation for road safety in TfL's Business Plan is only part of the investment into improving the environment and safety for pedestrians.

Funding from a range of budgets is invested into schemes that also benefit pedestrians.

For example the £100m dedicated to the Better Junctions programme over the course of the Business Plan will deliver major improvements at key junctions across London that will improve safety for pedestrians.

Our funding for education and training for HGV drivers also has a significant benefit for pedestrians by raising awareness among drivers of the hazards faced by vulnerable road users.

Pedestrian safety also benefits significantly from the £90m investment in Safety Cameras and Road Safety Engineering works on the TLRN across London. This included red light cameras at many crossings and a wider safety camera network on borough road and the TRLN.

A lower level apportionment of the road safety budget to activity solely focusing on improving safety for pedestrians is not possible because these interventions prevent deaths and injury across all road users, not solely pedestrians

Appendix E: List of 26 boroughs that have either delivered, or are in the process of delivering, schemes that embrace the core principles of key walking routes

Dear Val

London Assembly Transport Committee meeting on 9 January 2014

Thank you for the recent letter dated 13 January 2014, following the Transport Committee's recent scrutiny of pedestrian safety. We are glad the Committee found January's meeting interesting and beneficial, and we are pleased to provide the additional information requested by several of the Members.

1.1 A list of the 26 TLRN sites where studies are underway to identify appropriate pedestrian safety interventions.

We are finalising the list of 26 sites prioritised for road safety studies and we will share this with you as soon as we can. Please note that the 26 sites are not exclusively concerned with pedestrian safety, and we may look at improvements for any of (or several of) the vulnerable road user groups depending on the risks identified at each site.

1.2 Confirmation of whether or not before and after safety audits are undertaken at sites where pedestrian guardrail (PGR) is removed.

We can confirm that both pre and post-removal audits are conducted for all locations at which PGR is removed.

1.3 Confirmation of whether or not telephone kiosks are included in guidance on the removal of street clutter from the TLRN.

We can confirm that telephone kiosks are included in guidance on the removal of street clutter from the Transport for London Road Network (TLRN), and we do consider removing or relocating kiosks as part of our scheme designs. However, in practice, removal and relocation are quite rare.

- 1.4 Confirmation of whether or not there has been before and after analysis of:
 - a) pedestrian compliance with signals; and
 - b) collision rates

at the 568 sites where pedestrian green man time has been reduced since 2010, and if this has been undertaken, what the impact has been.

We are pleased to confirm that long-term trends show pedestrian casualty rates have been consistently falling across London. 2012 was an exception, but provisional figures for 2013 show substantial improvement and the continuation of this long-term trend.

In 2010, we updated our traffic signal design standards to align with the Department for Transport's (DfT) latest national guidance. This guidance is accepted as the national standard and provides minimum safe design parameters for traffic signal timings. As a result, all "far-side indicated" crossings in London now have a minimum six second green man invitationto-cross period, providing sufficient time for pedestrians to step off the kerb and start their crossing, followed by a blackout period designed to enable pedestrians walking at a speed of 1.2m/s to safely complete their crossing once the green man has gone out. It is important to point out that pedestrians have both the green man time and the blackout period to safely cross the road, which means that, in practice, the combined green man and blackout elements actually allow pedestrians more time than the 1.2m/s prescribed by the DfT. There is also an additional safety critical period of at least three seconds built into each signal cycle after the red man has illuminated, and before the traffic signal goes green which provides further time for pedestrians to complete their crossing of the road.

Beyond this it should be noted that the Highway Code clearly states that road users must give way to anyone still crossing after the signal for vehicles has changed to green. We have also taken the decision to no longer introduce near-sided signals, for which the DfT prescribes a minimum four second green man invitation to cross period, on the TLRN, and we are encouraging the Boroughs to do likewise on their road networks

While these are the confines of the system within which TfL must work, as required by legislation, we do recognise that there is some confusion about crossing timings and the various parts of the pedestrian phase mentioned above. That is why the forthcoming Pedestrian Safety Action Plan will outline a number of measures to address this area, including the use of new and pioneering technology that we are lobbying the DfT to allow us to introduce.

One successful example of this is the Pedestrian Countdown at Traffic Signal (PCaTS) technology that we are already implementing across London to address this uncertainty around crossings. PCaTS is being

installed at a number of locations in order to let pedestrians know how long they have left to cross the road once the green pedestrian signal has gone out. This countdown information allows pedestrians to make more informed crossing decisions. By the end of March 2014, PCaTS will have been installed at 200 sites, incorporating around 550 pedestrian crossings.

While we do not routinely carry out any before and after analysis of pedestrian compliance with traffic signals at locations where the pedestrian green man time has been reduced, we do however undertake before and after monitoring of the number of collisions that occur at locations where schemes have been installed on both the TLRN and borough roads through the Traffic Accident Diary System (TADS). This includes monitoring the number of collisions at all PCaTS sites across London. We have commissioned research through the Transport Research Laboratory of PCaTS sites to look at pedestrian attitudes at different types of crossing in London. This research, which was conducted in 2011, concluded that PCaTS is a popular measure amongst London's pedestrians as it helps overcome pedestrian misunderstandings about the blackout period, and so improves the pedestrian experience at junctions.

We undertake regular monitoring of collisions and casualties across London through our ACCSTATS database, which will identify locations where any casualties and collisions occur. If these coincide with locations where the junction or crossing had been changed, this would be identified through follow-up analysis.

It is important to note that changes in signal timings are one amongst many factors that could be related to changes in casualty and collision figures. TfL is happy to investigate individual crossing facilities where people have concerns about crossing times or any other aspect of the crossing facility.

1.5 Confirmation of when the external review of TfL's Road Safety audit procedures (as set out in the Road Safety Action Plan) will take place and whether the findings will be made public.

While our current Road Safety audit procedures fully comply with DfT national standards, and are very well regarded nationally, we are in the process of developing proposals for an external review of our auditing procedures to establish whether further improvements can be made. We expect this work to be commissioned in spring 2014, and the recommendations from the review may result in changes to our audit procedures, a copy of which can be found on our website at the following location:

http://www.tfl.gov.uk/corporate/projectsandschemes/23293.aspx

1.6 Details of any evaluation of the overall impact of Operation Safeway, and confirmation of how TfL will use this evaluation to inform its future work of pedestrian safety.

The combined strengths of the TfL-funded Metropolitan Police Service (MPS), Safer Transport Command, MPS Traffic Operational Command Unit and City of London Police (CoLP), over 2,500 officers, have been mobilised for Operation Safeway which aims to reduce the risk to cyclists and other vulnerable road users by enforcing the rules of the roads. In addition to enforcement, officers have been engaging with all road user groups, cyclists, motorists and pedestrians, on how they could improve their safety on London's roads.

Working with the MPS, we have assessed the initial findings from Operation Safeway, both in terms of the results and the process evaluation, so that together we can embed Operation Safeway into day to day activities of TfL funded officers. The MPS and CoLP will be running Safeway operations throughout 2014 and we are working with them on building an outcome evaluation for the next phase which will assess high visibility traffic enforcement on road-user behaviour, compliance with the rules of the road, collisions, congestion and crime.

For the initial phase of Operation Safeway our evaluation approach was to assess the acceptability of this operation to the officers involved. This means that we surveyed the officers to assess the impact of the training and briefings received, and to gather details on their attitude and approach to the operation. This type of evaluation is vital in understanding the components of a successful operation and in ensuring that good results are replicable, and the difference in results between areas can be understood.

Initial results show that a total of 13,792 Fixed Penalty Notices (FPNs) and 502 process notices were issued between 25 November and 9 January, including 4,197 FPNs and 20 summons issued to cyclists and 9,595 FPNs and 482 summons issued to motorists. Officers made 224 arrests for a range of offences, including seven for driving while disqualified and 13 where the offenders were wanted by the police for another offence.

The most common offences committed by cyclists were having no lights (1,616 FPNs/summons), failing to stop at red traffic signals (1,232 FPNs/summons) and cycling on the footway (1,051 FPNs/summons).

The most common offences committed by motorists were mobile phone use (2,553 FPNs/summons) and seat belt non compliance (2,446 FPNs/summons). In total, 237 FPNs/summons were issued to motorists for Advanced Stop Line related offences and 860 for failing to stop at red traffic signals.

There was a significant reduction in observed, and penalised, non-compliance at Safeway junctions over the course of the operation, which amounted to an 85 per cent reduction between week one and week seven.

Pedestrian safety formed a key element of the operation. Officers engaged with over 50,000 pedestrians which included issuing advice on their behaviour which could put them in danger. Pedestrian safety will continue to be a key part of Operation Safeway activities going forward.

1.7 Details of which boroughs have expressed opposition to the introduction of pedestrian countdown (PCaTS) and their reason for doing so.

Formal opposition to PCaTS has not been received from any of the London boroughs. However, the boroughs below have objected to PCaTS at specific sites for the reasons provided below:

City of London	00/000125	Queen Victoria Street / Bread Street / Friday Street	Low foot fall – alternative suggested
Hillingdon	26/000130	Rickmansworth Rd / Ducks Hill Rd	Low foot fall – alternative suggested
Barnet	30/000011	Finchley Rd / West Heath Ave / Dunstan Rd	Low foot fall – alternative suggested
Southwark	08/000012	A215 Denmark Hill - A2217 Coldharbour Lane - B239 Daneville Road - Milkwell Yard	Major town centre redevelopment planned
Southwark	08/000212	A2 Old Kent Road - Mawbey Road - Glengall Road	Low foot fall
Hounslow	25/000211	The Causeway – Green Man Lane – Heron Way	Low foot fall

1.8 Information on the follow-up to the Mayor's Roads Task Force.

In response to the recommendations of the Mayor's Roads Task Force, which last July unveiled a bold new vision to radically improve London's roads, streets and public spaces, a total of 50 projects are now underway, in a £4 billion programme as part of the largest investment in the capital's road and street network in a generation.

This was announced on the 3 March at an event with key stakeholders, including borough representatives, cycling and walking groups, the freight industry and utilities. Alongside the transformation of 33 of London's biggest road junctions announced last month as part of the Mayor's cycling programme, there will also be more than £200m of additional far-reaching improvements at 17 major locations across the capital, including at;

Croydon Fiveways; Balham High Road; Brent Cross; Charlie Brown's Roundabout; Euston Road; Lombard Roundabout; London Road Roundabout; Malden Rushett; Mill Hill Circus; Purley Cross Gyratory; Barking Riverside; Seven Sisters Road; Stoke Newington Gyratory; Thornton Heath Ponds; Trinity Road; Tulse Hill Gyratory and Victoria Circus.

One of the other key schemes to benefit is one of London's biggest regeneration projects - the redevelopment of the northern roundabout at Elephant and Castle. The radical plans, which will support 5,000 new homes and 4,000 jobs, will vastly improve the facilities for road users and local residents. Dedicated cycling facilities will also be created, with work beginning early next year. The IMAX roundabout at Waterloo will also be redeveloped, creating better interchange facilities at Waterloo station as well as improved facilities for cyclists.

The investment map can be viewed on our website at the following location:

http://www.beta.tfl.gov.uk/cdn/static/cms/documents/roads-task-force-map.pdf

A progress report on the work of the Roads Task Force can be viewed on our website at the following location:

http://www.tfl.gov.uk/assets/downloads/corporate/roads-task-force-progress-report.pdf

I hope that the Committee Members find this information useful. Please do not hesitate to contact me again if you have any further enquiries.

Yours sincerely,

Leon Daniels

Your ref:

Our ref: ACTP/2014/53 Metric 2014020002059

3 March 2014

Dear Ms. Shawcross AM,

Many thanks for your letter dated 17th February 2014. Please find responses to the questions you raise below:

Prioritisation of locations where enforcement takes place:

Locations for enforcement Operations such as Operation Safeway are selected through analysis of validated personal injury collisions data, extracted using a bespoke collision mapping software. The validation process of the data involves collaboration between the MPS, TfL and the Department for Transport. High priority locations are selected by analysing the numbers of collisions at a particular junction/location over a specified period of time, often over a single calendar year but more commonly over a three year period to allow for fluctuations in the data which is the nature of collisions in general.

Enforcement of speed limits:

The MPS supports all road safety measures that influence drivers into slower speeds, especially in predominantly residential areas thus improving driver standards and the safer road environment for all road users.

The MPS has limited capacity and resilience for enforcement. The introduction of 20mph speed limits and zones should be self enforcing, that is to say, there should be engineering measures in place to physically ensure driver compliance. The roads authority will be responsible for ensuring that schemes meet those aims.

Speed cameras - numerous studies show that the use of speed cameras do cause a slowing of vehicles in the vicinity of visible safety camera sites, especially on the approach. There is some evidence of an increased risk of "rear end shunt type" collisions. This collision risk increased exponentially after a period of time as drivers become more aware of such locations on a regularly used route.

At this time, studies on "average speed cameras" covering a wider geographical area are not available due to the relative newness of such schemes in urban areas.

It has also been found that engineering schemes incorporating vertical deflections (such as speed humps or speed cushions) offer the largest benefits in speed reduction and collision risk reduction.

The increase in the number of digital camera sites over the next few years will mean that significantly more offences will be detected. While it is inevitable that the numbers will outweigh the capacity of the courts to follow up on all cases, it will be desirable to increase court capacity as much as possible and to ensure that offences are being detected and prosecuted in accordance with a strategy which:

- Reflects the Red/Amber/Green (RAG) status of the sites used (the RAG status will be determined by the history of killed or seriously injury collisions at each site).
- Maintains an even background geographical enforcement pattern.
- Takes into account community concern.
- Incorporates an offence selection system which is fair and can withstand scrutiny.

Any strategy to deliver enforcement will be dependent upon accurate and timely RAG status reports for all safety camera sites delivered to the MPS by TfL.

The expected growth in the number of digital speed cameras will mean that future deployments will need to be intelligence based to provide enforcement at a time and level commensurate with the likely collision risk at individual sites. The strategy will also need to deliver the desired number of offences within our operational case and available court space.

The MPS fully supports the use of speed cameras.

However, traditional speed enforcement is of high value and should not be disregarded as the personal interaction between officer and driver can lead to the discovery of further offences; e.g. drink/drug driving, disqualified driving, offenders wanted on warrants, no insurance, vehicle defects etc.

The IT system used at Marlowe House, Traffic Criminal Justice, cannot provide the data requested about the number of buses operated by TfL that have been reported for speeding. It cannot differentiate down to vehicle type (e.g. bus) and cannot say whether a vehicle is privately or corporately owned.

Operation Safeway:

Phase one of Operation Safeway (22/11/2013 - 17/01/2014) used bespoke analysis to target known junctions which have been identified as having a number of high 'Killed and Seriously Injured' (KSI) road users. Engagement and enforcement were the tools used at these locations, focusing on all types of road users - pedestrians, cyclists or motorists. An observable change of behavior was seen during the operation. For example, an extra 900 cyclists had lights fitted to their bikes and an increased use of high visibility clothing.

In addition feedback was obtained from officers in respect of street furnishings such as signage and junction markings as well as identifying areas of potential risk. This information was fed to TFL daily, who linked in with the relevant streets management department to take further action if required.

By using bespoke analysis, target locations have been identified that more closely reflect cyclist casualty levels. 30 key 'cycle' high risk locations across 11 boroughs that coincide quite closely with original Safeway junctions have already been

identified. A smaller contingency of staff, currently made up from both the Safer Transport Command & Traffic Command (Roads & Transport Policing Command in the future) will be tasked to patrol selected junctions from the original Safeway locations. Throughout the year there will be two mass deployment days per month, where the Operation Safeway brand will be replicated. This operation will be constantly reviewed to ensure that it is meeting the key objective of reducing the number of 'Killed and Seriously Injured'.

Industrial HGV Taskforce:

The taskforce use identified stop sites, working with Driver & Vehicle Standards Agency staff (DVSA) to perform roadside checks. Operators that repeatedly come to light then receive an official visit from DVSA supported by the police officers on the team. Intelligence flows are being developed between the police/DVSA/TfL which is currently being slowed by legislation (confidentiality). Work is ongoing to resolve these issues.

TFL are looking to dedicate a number of analysts to work on Operator/Driver repeat offenders and drivers working on both analogue and digital tachographs, which can double their driving hours, working for different operators.

TFL work with police to suspend bus lanes etc to provide a safe working area for the team.

Prosecution and conviction rates for pedestrian fatalities:

With reference to pedestrians killed on the roads (obvious suicides and natural deaths have been discounted)

Type of vehicle that hit pedestrian	Percentage of total fatalities
Car	46
Lorry .	18
Bus	15
Van	12
Motorcycle	3
Licensed Cab	3
Coach	1
Pedal Cycle	1
Unknown	1

Of the 2012 cases involving a pedestrian the majority have been concluded however 8% are awaiting a decision on charging by the Crown Prosecution Service or are still subject to police investigation.

50% of all the 2012 cases have already been resulted in Coroner's Court as an accidental or natural death unrelated to the collision.

Charges and prosecutions in 2012.

Offences	Result
Death by dangerous driving	8 Charges, 3 await trial, of these 4 convicted, and 1 not guilty.
Death by Careless driving	11 Charges, 1 the CPS offered no evidence at court, 8 convicted, 2 found not guilty,
Death whilst under the influence of drink or drugs	1 Charge and this 1 awaits trial
Death whilst disqualified or not insured	4 Charges, 4 Convicted,
Failing to stop.	3 Charges, 2 convicted and 1 not guilty

Collecting Stats19 data at road traffic collisions:

The stats 19 data is a DfT requirement and is completed in all collisions where such a collision is reported by police and is the subjective opinion of the reporting officer. In some situations, such as in collisions where the Serious Crime Investigation Unit (SCIU) attend and investigate, the view of the reporting officer could differ from that of the investigating collision investigator.

It is possible that a reporting officer may not have a driving licence, so the opinion is not based on knowledge or experience. It would not be possible to ensure that only properly trained and experienced officers complete the Stats 19 data due to resourcing issues.

Yours sincerely,

Alison Newcomb Commander Roads Policing

Date: 24th February 2014

Ms Valerie Shawcross Chair London Assembly Transport Committee

via email to lucy.brant@london.gov.uk

Dear Ms Shawcross,

London Assembly Transport Committee Site Visit to Oxford Street on 28 January 2014 and investigation into pedestrian safety in London

Thank you for your letter dated 10 February 2014 to Councillor Philippa Roe, Leader of the City Council, concerning your Committee's investigation into pedestrian safety in London and your visit to Oxford Street on Tuesday 28 January 2014. I have been asked to reply to you on behalf of the Leader, but your letter has only recently been received.

I am disappointed that the City Council was not invited to attend your visit to Oxford Street with a suitable representative from TfL as that might have helped your Committee's investigation. I suggest that you consider making an additional site visit with Martin Low, the City Council's City Commissioner of Transportation and Graham King, the City Council's Head of Strategic Planning and Transportation who have a wealth of knowledge and experience, which might assist you.

Westminster City Council's Environment Policy and Scrutiny Committee considered some of the points that you have raised in your letter at its meeting held on 14 March 2013. The Appendix to this letter contains a relevant extract of the minutes. A copy of the report prepared for the Committee is available on the City Council's website via the following link:

http://transact.westminster.gov.uk/CSU/Policy_and_Scrutiny_Committees/Current_P_and_S_C_ommittees/Environment/2013/14%20March%202013/Item%206%20-%20Accidents%20and%20Road%20Safety%20Measures.docx

The City Council is currently drafting both a Cycling Strategy and a Walking Strategy and these will set out our way forward to help and encourage both cycling and walking. Although the two modes share many similarities they can have very different impacts on the built environment and can often conflict, especially on Westminster's complex, busy, fine urban grain. Our draft Cycling Strategy was recently consulted upon publically and officers are currently analysing the results before producing a final version for approval. Work will commence on the drafting of a Walking Strategy later this spring. The Walking Strategy will reflect our City Plan Strategic Policies (adopted in November 2013), which seeks to prioritise pedestrian movement, particularly in areas with high pedestrian volumes. It will set out a number of objectives and

actions around the following broad themes: creating a safe, legible and attractive physical pedestrian environment for all; improving pedestrian safety through education and campaign work; and encouraging Westminster's resident, worker and visitor populations to therefore make more of their journeys on foot. The points that you have raised in your letter and also the findings of your forthcoming report on pedestrian safety will be considered when drafting the strategy.

Turning to your presumably preliminary findings as set out in your letter, the City Council has the following comments:

Footway space and impact of Crossrail:

The City Council is working closely with TfL, Crossrail, Camden London Borough Council,. NWEC, property owners, local businesses and residents to develop proposals to respond to the additional pedestrians expected as a result of Crossrail and those pedestrian movements generated by the developments of the land above the Crossrail Station Sites.

These studies are underway and are due to report later this spring. You should also be aware that following the report of the West End Commission led by Sir Howard Bernstein, the City Council in conjunction with the Mayor of London, TfL and the GLA, Camden London Borough Council and New West End Company (NWEC) is now reviewing all of the issues raised through working groups, especially in relation to Transport and Public Realm issues and these working groups report back later this year.

Oxford Street/New Bond Street/Vere Street Junction:

This junction operates in three stages with an all red pedestrian stage when pedestrians getting a six seconds invitation to start crossing; a stage for traffic crossing Oxford Street from Vere Street into New Bond Street; and a third stage for traffic travelling along Oxford Street.

Many pedestrians will cross during periods when a red pedestrian traffic signal is showing at all traffic signals in London as they are given very short periods inviting them to start crossing that are often about four to six seconds, but extended where appropriate and then wait another 90 seconds for the next green pedestrian traffic signal.

The City Council therefore supports the installation of Pedestrian Countdown traffic signals as these help pedestrians take an informed decision on whether they have sufficient time to cross safely and can take advantage of safely crossing without the green pedestrian traffic signal inviting them to do so.

Oxford Street/Holles Street/Harewood Place Junction:

TfL is better placed to advise you on its traffic signals timings, but I understand that the junction never double cycles as suggested in your letter and pedestrians get much more green time than other locations. It is also important to remember that traffic flows and pedestrian flows can vary enormously by time of day and day of week.

The traffic signals at the junction of Oxford Street with Holles Street and Harewood Place operate in two stages. The City Council introduced moving traffic controls at the junction, which now prohibit all turning movements so that traffic crossing Oxford Street does so at the same time that pedestrians also cross Oxford Street and then pedestrians and vehicles both travel

east/west along Oxford Street during the second traffic signals stage. This has created a much safer junction and there have been reduced delays to all road users.

Oxford Street has large numbers of buses and bus drivers already have to travel close to the kerbs next to the widened footways and therefore there is no scope to further widen the footways.

Conflict between cyclists and pedestrians with red light running:

The City Council supports a continuation of the very successful Operation Safeway mounted by the Metropolitan Police and TfL in late 2013 in response to several tragic deaths of cyclists. Encouraging all road users to behave considerately and taking enforcement action against those who contravened controls made a huge difference to road safety in London. We would welcome its continuation and hope that will feature amongst your Committee's recommendations.

<u>Larger vehicles encroaching on pedestrian crossings and masking pedestrian's sight lines of pedestrian traffic signals:</u>

I am not sure when you made your visit to form these observations as between 7am and 7pm, Monday to Saturday there should generally only be buses, taxis and pedal cyclists in Oxford Street. Officers from the City Council have previously observed buses masking sight lines when they undertook a site visit with Tom Kearney and some buses stopped within pedestrian crossing areas defined by the lines of studs.

It would be useful to have a discussions with bus drivers to better understand the problems that they face and why they are stopping within crossing places.

Different types of pedestrian crossings in close proximity:

The City Council wants some of the traffic signals technology such as pedestrian call/cancel associated with Puffin pedestrian crossings to be allowed to be deployed at traffic signal controlled junctions and pelican crossings. We also want greater deployment of Pedestrian Countdown traffic signals.

Tactile Paving Provision:

We are happy to have a discussion with the visually impaired, but consider that the recommended tactile paving layouts suggested by the Department for Transport can cause them problems when followed precisely as you can end up with much of the footway covered in tactile paving and that then causes more confusion. When a road network has evolved organically or when street grids are dictated by historical features that result in roads meeting at odd angles, but also at cross roads, the presence of tails in the same tactile finish for the warning that one has reached the crossing as the texture for the warning that one is about to run into a live traffic lane is poor design in the first place. In order to simplify the confusion Westminster City Council has often removed the confusing tails to just leave the strip warning when one is running into danger. We feel that this aspect of the tactile guidance when it was drafted was poor and needs reconsideration. Where tails do give some assistance without being confusing we do agree that they can be used as far back as they are useful (not always to the building line- particularly if that is cluttered with other installations such as restaurant seating, utility boxes, bench seats for the elderly and recycling equipment).

Approximately 80% of the City of Westminster lies within a conservation area and we have generally relied on the remarks in the Department for Transport guidance that in historically sensitive areas it is regarded as acceptable to leave out or amend the colour (as long as red is not misused) so the general practice is to have self coloured paving to match the adjacent, but in guidance adopted in 2011, we followed the example used recently on the Transport for London Road Network (TLRN) to use charcoal tactile where contrast is desirable.

"A" Boards and removing street clutter:

In terms of A boards our guidance states, Westminster City Council has zero tolerance on these items. Equipment with a similar impact on the ability of people with disabilities such as lottery stands and postcard displays can be included with this. We have a clear duty to remind owners and operators that these obstructions should not be on the adopted footway (and that can include de facto highway). The City Council has removed a huge amount of street clutter, including pedestrian guard railing over the years and particularly in preparations for Olympics 2012. We are keen to remove "A" Boards located on highways and work with businesses and land owners to see them removed from forecourts.

Oxford Circus Diagonal Pedestrian Crossings:

Pedestrians crossing along the 27 metres long diagonal crossings get a six seconds invitation to cross followed by 19 seconds black out period when the Pedestrian Countdown traffic signals operate. That means that they are getting the time generally allowed assuming a walking speed of 1.2 metres per second (a pedestrian travels 30 metres in 25 seconds travelling at 1.2 metres per second).

The City Council, The Crown Estate and TfL designed and implemented the award winning Oxford Circus Diagonal Pedestrian Crossings Scheme. It was a good example of involving experts to give input in the design process on the needs of people with disabilities and we involved the GLA who helped assemble the panel.

When the Oxford Street Regent Street and Bond Street (ORB) project was being set up, we created a reference group of people with wide experience and representing different disabilities to find the least bad compromises for the ORB area. Through a variety of circumstances after the group last met there have been a number of deaths in the group and it is now in need of reinvigoration, possibly on a tri-borough basis as we now share some functions and expertise with two neighbouring boroughs, but it was their recommendation to have the flush, step free arrangement for the shortest crossings that would be used by wheelchair users and those with limited leg lift and the longer, diagonal route have the kerb lit to assist those negotiating the junction quickly that could include those with guide dogs. Westminster City Council and other central London Boroughs that have a lot of tourists and incoming workers and domestic visitors needs to take a wider view than a local access committee. We would welcome your thoughts on how we could pool expertise on such matters to find the best compromise, as we did at Oxford Circus.

The scheme helps the 30,000 to 40,000 pedestrians an hour who cross Oxford Circus and the 19,000 passengers entering and leaving the Tube Station. It has made a real difference and resulted in a 70 per cent increase in footway space and removed pedestrian guard railing, which treated pedestrians like herds of cattle and acted as a potential crushing point for cyclists.

Other measures to help pedestrians:

We have also implemented other much needed pedestrian improvements in Oxford Street and Regent Street, which include providing central traffic islands to create perch points for pedestrians who seek to cross informally.

We have also undertaken studies with NWEC and local businesses to develop pedestrian friendly measures in Bond Street (named as Old Bond Street and New Bond Street) and the Soho area and these are underway and also due to report in Spring. We face many competing and conflicting demands for road space from a large number of groups and therefore often work up holistic schemes, which seek to meet the needs of a wide range of road users. The Piccadilly Two Way Working Scheme and the Baker Street Two Way Working Scheme are two examples. These schemes are of vital importance to the West End economy, which is responsible for 3% of the UK GDP and 20% of the London GDP. The schemes are developed by the City Council engaging with the range of external funders and stakeholders who see the value of investment in the public realm and they help deliver our City Plan Strategic Policies.

In Oxford Street East, we have reallocated space to pedestrians by increasing the available free width of the footway through footway widening and reducing street clutter. The ability of pedestrians to cross the road had been a major inhibitor previously and this has been overcome through the provision of a central median traffic island. This allows pedestrians to informally cross in either one or two movements and provides a safe perch point. We have also provided raised entry treatments on side roads. Oxford Street East Phase 1, between Oxford Circus and Berwick Street has been implemented and included removing traffic lights at the junction of Oxford Street with Great Portland Street, which has reduced delays to all road users. We have used chamfered kerbs on the central islands to help pedestrians and allow buses and emergency services' vehicles to mount the kerbs if vehicles breakdown. Oxford Street East Phase 2, between Berwick Street and Tottenham Court Road has started and is being phased to accommodate Crossrail and adjacent major developments.

The Crown Estate has funded major public realm schemes in Regent Street and the side roads along it and is extending that approach to other parts of its property portfolio, such as the St James's area.

If you would like to have another site visit with Martin Low and Graham King, then please let me know.

Yours sincerely

ROSEMARIE MACQUEEN

RA May Organ

Strategic Director Built Environment

Extract of Minutes of Westminster City Council's Environment Policy and Scrutiny Committee Meeting held on 14 March 2013

- 6.1 The Committee received a report that provided an overview of road accident data and trends in Westminster, explained the steps that the Council is already taking to improve road safety, and how this work will be continued through the Council's transport programmes and the development of walking and cycling strategies. The report had arisen as a result of a request made by Mr (Tom) Kearney, a pedestrian safety activist campaigning for improvements to Oxford Street and Regent Street. The request was supported by Brake, the road safety charity.
- 6.2 The Committee heard evidence from witnesses Caroline Russell, Living Streets, who also made representations on behalf of Mr (Tom) Kearney who could not be present, Dominic Fee, Westminster group of the London Cycling Campaign and Ben Johnson and David Rowe, Transport for London.
- 6.3 Caroline Russell addressed the committee on behalf of Living Streets, a national charity that campaigns on behalf of pedestrians to create safe, attractive and enjoyable streets. One of its key campaigns for achieving this is for 20 mph speed limits to be introduced where people live, work or shop. She commented that no matter how people travelled into and around Westminster some part of their journey will be made on foot. She suggested that in addition to introducing a 20 mph speed limit on Westminster's roads to help tackle road safety the Council should also consider whether pedestrian crossings are located where people want to cross. Ms Russell also made representations on behalf of Mr (Tom) Kearney who had been seriously injured after being hit by an articulated bus on Oxford Street while waiting to cross the road. Given the extremely high volume of pedestrians using this world-famous street she suggested that the speed limit on Oxford Street should be reduced to 10 mph. She also suggested that the street should be pedestrianised by the time the high frequency, high capacity Crossrail service opens in central London to take into account the expected increase in pedestrian numbers.
- 6.4 Ben Johnson and David Rowe, set out how Transport for London has worked with the City Council through its Local Implementation Plan to improve road safety. Details of the schemes already being implemented in Westminster were set out at section 6 of the committee report and included both physical measures such as the installation of pedestrian countdown timers at traffic signals and the Oxford Circus diagonals to supporting a range of transport education initiatives.
- 6.5 Dominic Fee addressed the committee on behalf of the Westminster group of the London Cycling Campaign. He welcomed some of the measures that Transport for London in conjunction with the Council had introduced to improve road safety for cyclists such as the removal of pedestrian guard rails and providing cycling awareness training for HGV drivers. He observed that in comparison to some boroughs Westminster did not provide as many dedicated cycle lanes. He expressed the view that to assist cyclists Westminster could make its cycling layouts simpler such as in Camden and that it could benefit not only from looking at best practice elsewhere but also noting the mistakes made by other boroughs. He stated that lowering the speed limit on Westminster's roads would also help to further improve road safety for cyclists as would undertaking more enforcement against all road users who contravene the rules.

- 6.6 The Committee considered the report and the information provided by the witnesses and in the ensuing discussion asked questions and made comments on a variety of issues including:
- •Whether there was any evidence that 20 mph speed limits or zones work to reduce KSIs and what impact such measures have on traffic flow?
- » Caroline Russell informed members that since Islington introduced 20 mph speed limits in 2010 the number of KSI's in residential roads had dropped in the borough. She contended that 20 mph speed limits do not increase journey times significantly and that traffic flow depends on how many vehicles can get through traffic lights. Ben Johnson advised that the evidence for 20 mph zones is compelling, much more so than for 20 mph speed limits.
- •That reducing the complexity of road layouts was an important factor in improving road safety. Other than speed humps what other features are effective in 20 mph zones?
- »Martin Low, City Commissioner for Transportation, outlined a number of physical measures that could be introduced to reduce traffic speed in a 20 mph zone. These included introducing entry treatments where zones begin to narrowing road widths. There were a number of road safety measures that could be introduced to assist cyclists such as providing separate lanes and changing one-way roads to two-way. The option for introducing the former in Westminster however was limited as many streets were too narrow. He also advised that pedestrians, cyclists and motorists don't tend to keep to segregated lanes and he considered a road space which is shared to be safer as road users are more likely to modify their behaviour to accommodate others.
- •The different types of pedestrian road crossings and which are preferred.
- »The City Commissioner for Transportation stated that his preference was to have modified pelican crossings (traffic signal crossings) which include pedestrian countdown timers. The latter informs pedestrians how much time they have left to cross the road safely which enables pedestrians to make an educated judgement on when they can cross. He confirmed that the Council was working with TfL to identify further locations for the roll out of pedestrian countdown timers however budget constraints would limit the speed and scale of the roll out.
- •The need to address cyclists' behaviour. Reference was made to the fact that some cyclists do not slow down when they see pedestrians crossing the street as cars do.
- » It was noted that the police have the power to enforce against cyclists who contravene road traffic laws. Some members considered that cyclists should be required by law to wear helmets and reflective jackets and to have a bell fitted to their cycle. The City Commissioner for Transportation stated that the latter was particularly important for alerting the visually impaired to a cyclists presence as in contrast to a motor vehicle they would struggle to hear a cycle approaching.
- •That the data comparison with other inner London boroughs doesn't sufficiently consider the different transport characteristics and modal shares between Westminster and other parts of inner London.

6.7 RESOLVED:

1. The Committee recommends to the Cabinet Member that the Council's policies on walking and cycling should take account of the expected increase in the pedestrian numbers as a direct

result of the high-frequency, high-capacity Crossrail service into Central London, particularly along Bond Street, Oxford Street and Regent Street, which are very close to the Bond Street and Tottenham Court Road Tube Stations.

- 2. The Committee recommends to the Cabinet Member that he seriously considers 20 miles per hour limits for vehicular traffic, if he believes it is appropriate in some locations.
- 3. The Committee recommends to the Cabinet Member that given the expected increase in the cycling population that more should be done to ensure that the increase in cyclists does not result in a corresponding increase in accidents involving bicycle users.
- 4. The Committee recommends to the Cabinet Member that he secures commitments to ensure that additional enforcement action taken when cyclists contravene controls is matched by equivalent actions, relating to other road users who violate safe practice on the road.
- 5. The Committee notes and commends the removal of pedestrian guard railing and the introduction of perch points through central traffic islands like those provided in Strand, Oxford Street, Regent Street, Piccadilly and Pall Mall to help pedestrians cross informally at other locations throughout the City of Westminster.
- 6. The Committee recommends to the Cabinet Member that there should be an increase, where financially possible, in "Pedestrian Countdown" traffic signals to help pedestrians take decisions after the short invitation to cross period when a green pedestrian traffic signal disappears, which could improve the safety for pedestrians and other road users.
- 7. The Committee recommends to the Cabinet Member to invest in a robust analysis of the data provided by Transport for London, in order to provide more meaningful data relating to the number of road users, so that more meaningful comparisons can be made with other London Boroughs, neighbouring Boroughs, the rest of London and internationally and take account of the increases in cyclists and pedestrians.
- 8. The Committee recommends to the Cabinet Member that given the percentage of elderly people involved in serious incidents on the road, education is seen a potential way to reduce the number of serious injuries and fatalities on the roads of Westminster.'
- cc: Cllr Philippa Roe, Leader of the City Council
 Cllr Ed Argar, Cabinet Member for City Management, Transport and Environment
 Martin Low, City Commissioner of Transportation
 Graham King, Head of Strategic Planning and Transportation

GLA Transport Committee Pedestrian safety inquiry

RoadPeace follow-up submission February 2014

1. Introduction

RoadPeace provided evidence at the Transport Committee's hearing on pedestrian safety on 9 January 2014. At the end of the hearing, we were asked what our priority was for improving pedestrian safety.

RoadPeace believes that, if active travel is to be encouraged, it requires not just safe infrastructure but a justice system that discourages road danger. We called for TfL to establish working group on Justice for Vulnerable Road Users. This would be modelled on the national working group, established by DfT in February 2013, with representatives from the CPS, Home Office, Ministry of Justice, ACPO, DfT, as well as from British Cycling, CtC and RoadPeace. Terms of reference include reviewing how the investigation of crashes, prosecution and sentencing of offenders, and the treatment of victims, can be improved so as to instill confidence in the justice system and encourage the public to walk and cycle more. The local group should include representatives from the magistrates and the police prosecuting at the Traffic Courts in London.

To support our call, we have provided more information and additional recommendations on the areas of:

- Collision reporting and investigation
- Criminal prosecution and sentencing
- Civil justice
- Victim services

We have also highlighted the key role of traffic law enforcement and repeated our calls for the police to allocate more priority to protecting vulnerable road users from the risks posed by drivers.

2. Collision investigation and reporting

Collision investigation

A thorough investigation is needed to ensure justice is done and prevention programmes are properly designed. But collision investigation is not a priority for the MPS. Road death investigation receives a fraction of that allocated to homicide investigation. In Spring 2013, the MPS reported that the homicide budget was approximately £60million whist that for road death and life changing injury investigation was only £7.7 million (MPS letter to Jenny Jones, April 2013). PER DEATH

TfL is to be commended for conducting research on the handling by the criminal justice system (CJS) of cyclists deaths and serious injuries (TfL, 2013). The first draft pedestrian safety action plan included a proposal for a similar study for pedestrians but this has since been removed.

In response to the findings on the cyclist CJS experience, RoadPeace submitted a list of recommendations to TfL on behalf of CtC, LCC and RoadPeace. This included an annual review of the legal outcome of fatal and injury collision investigations, including reasons for No Further Action decisions, as well as transparency around collision investigation procedures, budget and staffing. The MPS was requested to identify good practice standards for injury collision investigation by borough police.

A Joint Inspectorate Review of road death investigation and prosecution is underway, by the HM Constabulary Inspectorate and the CPS Inspectorate, with London one of the areas to be covered. Whilst a joint inspectorate review has been a long standing call of RoadPeace, this review will not include serious injury investigations. These collisions are known to receive a fraction of the resources allocated to road death investigations. As the police are responsible for most charging decisions and for prosecuting in Traffic Courts, a review of their effectiveness in investigating and prosecuting injury collisions is important.

The new Roads Policing and Transport Command could improve collision investigation, but only if resources and priority is allocated, as this command will also be responsible for investigating other incidents, such as assaults on buses. It is uncertain if this new Command will also be responsible for prosecuting drivers in Traffic Courts.

Recommendations

- The judicial/legal outcome of fatal and injury investigations should be reported. It should be possible to know how many NFAs were due to lack of evidence or driver's proof of innocence.
- Collision investigation procedures, budget and staffing should be reported.
- An annual conference on collision investigation and prosecution should be held. RoadPeace can assist with this.
- A review of serious injury collision investigation and prosecution should be conducted. It should be
 possible in to determine if injury collision investigation and prosecution improves under the new
 Roads Policing and Transport Command.

Inquests and the Highway Code

The majority of road deaths end up in the coroner's court, and coroners have a public health duty to prevent future deaths. Few coroners do make a report to prevent future deaths. One of these was by a North London coroner who asked if the Highway Code should be revised so that drivers are told to reduce their speed while a pedestrian is in the road. One third of reports made by London coroners relate to a death by a vulnerable road user by a lorry but coroners are not being kept informed of TfL's efforts, including with promoting HGV safety technology, to reduce lorry danger.

Recommendations

- Coroners be offered training on TfL's systems approach and lorry danger and encouraged to make reports which tackle danger at source.
- The Pedestrian Safety Working Group be requested to suggest Highway Code revisions which would promote walking, as the Cycle Safety Working Group is doing to promote cycling.

Collision reporting

Whilst cyclist deaths are well reported in the media, the same cannot be said of pedestrian deaths. Official statistics are not available until the following year.

There is also a problem with under-reporting as well as timeliness. DfT is required to refer to reported road casualties to remind readers that these statistics are not complete. This should be required of others using the Stats19 data.

Recommendations

- The MPS should issue a press release after every road death as well as a road death prosecution.
- Local newspapers should be encouraged to cover all road deaths, and not just cyclist deaths.
- TfL should provide timely data on deaths and serious injuries, even using preliminary figures, as the DfT does with drink drive related casualties.
- TfL should refer to reported road casualties and use the more recent DfT under-reporting estimates.

3. Criminal prosecution and sentencing

Charging standards

Disregard for vulnerable road users (VRU) is defined as Dangerous Driving in the CPS charging standards. But prosecution of Dangerous Driving is rare with fewer than two drivers a day prosecuted for Dangerous Driving in London in 2012 (MOJ, 2014). The Evening Standard recently reported a case of a pedestrian seriously injured by a driver doing over 55mph in a 30mph. the driver was only prosecuted for Careless Driving. Drivers are much more likely--Over20 times as much—to be prosecuted at court for the summary offence of Careless Driving than Dangerous Driving, and this does not include those sent on driver offender training courses or given Fixed Penalty Notices.

Downgrading of dangerous driving to careless driving remains a serious concern. RoadPeace has called for the charging standards of careless and dangerous driving to be revised and British Cycling included this in their recent Choose Cycling manifesto.

Transparency and road crime statistics

Despite open justice being a government priority, there is a lack of transparency with the prosecution of driving offences. These include those heard at court, given FPNs, or sent on remedial driver training courses, all of which are reported separately.

RoadPeace's 2012 Police and Crime Commissioner Manifesto's key call was for *Road Crime to be treated as Real Crime*. This included counting the victims of road crime, something which is still not done, not in London or at the national level. Those killed and injured by law breaking on the road are not included in victim of crime statistics. It is not known how many drivers were prosecuted for killing child pedestrians by driving dangerously or injuring elderly pedestrians by driving carelessly.

Recommendations

- Transport Committee support calls for review of charging standards for Careless and Dangerous Driving given its importance to the promotion of active travel.
- The Mayor should have the MPS compile an annual summary of driving offences in London that includes all prosecution methods.
- Victims of road crime should be counted and included in victim of crime statistics.

Sentencing

RoadPeace was asked about tougher sentences at the inquiry. Causing death by driving sentencing guidelines were last updated in 2008 and are overdue for review. In 2012, the Mayor wrote to the Justice Minister requesting they be reviewed and the Sentencing Council agreed to review them. But this is now on

hold, pending a review of road traffic regulations by the Ministry of Justice. RoadPeace has called for the review to include the general offences of Dangerous Driving and Careless Driving.

The latest statistics show that in 2012, 29 of the 49 drivers convicted of causing a death in London were sent to prison. This included almost all those convicted of Causing Death by Dangerous Driving, Causing Death by Careless Driving whilst under the Influence of Drink/Drugs, and Causing Death by Driving Whilst Unlicensed, Disqualified, or Uninsured. One third of drivers convicted of Causing Death by Careless Driving were sent to prison.

But apart from causing death by driving, prison is rarely used for driving offences and understandably so. A misjudgement or lapse of attention can result in the death or serious injury to a vulnerable road user. This level of culpability does not justify a custodial sentence. RoadPeace has never called for prison for Careless Driving and nor even thinks it should be mandatory for Dangerous Driving.

But alternative punishments, such as driving bans and vehicle confiscations, should be used much more often. Apart from where driving bans are mandatory, drivers are very rarely banned, as highlighted in Jenny Jones' **London's Lawless Roads**. Only 2% of drivers convicted of Careless Driving being banned. And bans can be given for only a few months. Likewise, vehicle confiscation is used for drivers without insurance but not drink or dangerous drivers.

For more information, see RoadPeace's Causing death by driving in London (2012) and <u>London Driving Bans</u> (2011).

Recommendation

- Transport Committee request Sentencing Council extend their review of to include the general
 offences of Dangerous and Careless driving, and not restrict it to those involving death and serious
 injury.
- London sentencing unit review not be restricted to custodial sentences but consider driving bans, fines, and vehicle confiscation.

4. Civil justice

Whilst only a small percentage of vulnerable road user collisions result in a prosecution, many more should qualify for civil compensation, given the lower standard of proof required. But civil justice has the potential to benefit many more pedestrians.

In *Gearing Up*, the Transport Committee recommended the benefits of a presumed liability (previously referred to as stricter liability) system be investigated. Presumed liability was the key request of those attending the Cyclists and the Law seminar in May 2013, organized by Jenny Jones, GLA member. But liability reform would help pedestrians even more than cyclists, for two reasons.

- 1. Pedestrian deaths outnumber those of cyclists by five to one; and for serious injuries, by three to two.
- 2. Children, elderly, and disabled should be classified as the super protected and qualify for compensation, regardless of their contribution to the collision. Society should better protect these extra vulnerable road users. These groups will be even more likely to be injured whilst walking than cycling.

RoadPeace has produced several briefings on liability reform for use with the TfL cycle safety working group. For more information on presumed liability, see our website.

Recommendation

 TfL commission research on the benefits of reversing the burden of proof in collisions involving pedestrians and cyclists.

5. Victim services

Criminal justice experience

As mentioned previously, the first draft pedestrian safety action plan had included a proposal for research on the experiences of pedestrians killed and seriously injured in the criminal justice system (CJS). RoadPeace has also highlighted the need for such a study given the summary conviction data reported by the pedestrian fatality study was worrying with very <u>few drivers convicted after a pedestrian death</u> (10% child pedestrian deaths, 5% elderly pedestrian deaths and 3% pedestrians killed by lorries).

Victim services' review

Baroness Newlove, Victims Commissioner, is currently undertaking a review of victim services in London. The government's new Code of Practice for Victims of Crime does not apply to those injured by drink/drug drivers or other summary motoring offences but victims of pickpocketing and theft do qualify for the services. Likewise, Victim Support helps victims of property crime but not those disabled by drink drivers.

For more information see the chapter RoadPeace wrote on *Ending the Discrimination Against Road Crash Victims* in the report by Priti Patel, MP Witham, *Rebalancing the Scales of Justice*.

Recommendations

- The pedestrian safety action plan reinstate research into the CJS experience of pedestrians killed and seriously injured.
- Level of satisfaction surveys be conducted with road crash victims (very few are done at present).
- Standard post crash leaflets be provided to those injured in collisions.

6. Traffic law enforcement (TLE)

Whilst this submission has focused on the post crash response by the justice system, TLE is essential to road traffic injury prevention. RoadPeace called for greater priority to be given to TLE in the new London road safety plan. This was to include both a TLE action plan and audit but also research on the incidence of bad driving in London. TfL used to commission research on the incidence of mobile phone use and seat belt use. No such research has ever been undertaken on the incidence of careless or even dangerous driving. Just as it was necessary to estimate the prevalence of domestic violence, so too is it necessary to estimate the extent to which law breaking on the road occurs.

Operation Safeway and harm reduction

As mentioned at the hearing, Operation Safeway demonstrated the resources that can be made available when TLE is a priority. We repeat our call for TLE to be based on a harm reduction approach with priority given to reducing the threat posed to others. Pedestrians crossing the road away from a crossing do not pose danger to other road users. Police are needed to detect and deter driving that intimidates or threatens vulnerable road users.

The new MPS Roads Policing and Transport Command should provide an ideal opportunity for a new approach.

30mph speed enforcement

Most speed enforcement is conducted by safety cameras. Manual police enforcement of 30 mph speed limits is very rare. Less than 20 drivers a day are given fixed penalty notices by the police for exceeding a 30mph speed limit. Yet borough police often have a deciding role in local speed limits, despite their lack of effort in enforcing existing speed limits.

RoadPeace believes an unenforced 20mph is better than an unenforced 30mph. Widespread introduction of 20mph limits should not depend on police enforcement.

Recommendations

- An annual TLE action plan and audit be prepared and based on the harm reduction principle.
- Research into the incidence of bad driving be conducted.
- The role of borough police in determining 20mph speed limits be reviewed in light of the lack of enforcement with 30mph limits.

Conclusion

Without an improved response by our justice system, there will be limited return on the investment in safer roads and active travel.

Living Streets submissions to pedestrian safety- Priority areas for the PSAP

Safer Roads

- 1. The introduction of a central London 20 mph zone as recommended by the RTF by 2015.
- 2. Work with boroughs to introduce 20 mph zones in all town centres and parts of the TLRN with significant pedestrian flows.
- 3. TfL to actively encourage and fund boroughs wishing to adopt a borough wide 20 mph default speed limit.
- 4. Set assumed walking speed on pedestrian crossings to 0.8 metres / second
- 5. To ensure all signalised crossing are fully accessible, fitted with audio warnings and/or tactile cones by 2015.
- TfL to work with boroughs to de-clutter and, where necessary, increase footway space on 100% of the TLRN to ensure a minimum Pedestrian Comfort Level of B+ (as recommended in the TfL guidance)
- 7. TfL to identify a critical list of locations for pedestrian safety on TLRN and begin to improve them within 12 months of identification.
- 8. TfL to produce a London Pedestrian Design Guidance in line with national and international best practice.

Safer vehicles

- 9. The extension of congestion charging throughout the area within the north and south circular roads by 2020.
- 10. By 2020, TfL should not have a relationship with any fleet operator (including bus operators and other contractors) or allow an organisation to operate within London's planning framework (eg construction vehicles), which does not include mandatory ISA on its vehicles set to those on the speed limit map managed by TfL.
- 11. The introduction and roll out of a freight consolidation strategy to reduce vehicle freight movements in London along the lines of the Regent Street initiative
- . A ban of all construction vehicles going beyond 20 mph except on arterial roads, enforced with Intelligent Speed Adaptation.
 - 13. TfL to immediately commission research in order to better understand the circumstances in which pedestrians are being killed by lorries and buses on London's streets.
 - 14. A review of how bus contracts are assessed so that the Quality Incentive Contracts take into consideration pedestrian and cyclist KSI performance.

Safer people

- 15. Reduce the enforcement tolerance and increase compliance of speed limits using safety cameras.
- 16. Produce an annual plan and audit of Traffic Law enforcement

- 17. Presumed liability with civil burden of proof reversed in collisions involving pedestrians and cyclists. Children, elderly and disabled are never held accountable for their actions/mistakes.
- 18. All future behaviour change campaigns based on principles set out in the paper on behavioural change written by the TfL Public Health Specialists

Working in partnership

- 19. Timely reporting of all fatalities
- 20. TfL to appoint someone at a senior level to champion pedestrians and push forward the proposals developed in the PSAP.
- 21. Speed enforcement expected of borough police

KILBURN OLDER VOICES EXCHANGE

Report to the London Assembly – Road Safety Meeting 9th January 2014

Kilburn Older Voices Exchange (KOVE) aims to raise the quality of life for older people in Kilburn & West Hampstead area. Our outreach work is currently includes wellbeing and continuing activities around Age Friendly Communities. Our project work has been widely recognised and the quality of our film making with older people highlighting issues impacting upon them has recently been recognised at national level with presentations undertaken at the International Urbanisation and Ageing Population Conference held at the Open University, the United Kingdom Urban Ageing Consortium at Manchester University as well as a close partnership working with Salford University.

What are the key concerns for (older, disabled) pedestrians in London?

KOVE have a network of over twenty five local groups of older people as well as wider links to other community groups and organisations. The following issues continue to be raised by older people.

Road Crossings - Kilburn High Road. KOVE regularly surveys the road crossings and the Green Man crossings times range from 6 to 11 seconds. The shortage of time remains a real problem for vulnerable and disabled people. We have previously discussed this with Camden and TfL who have advised on the safety of the 'black out period' for people to cross but the experience of many people we speak to is that they do not feel safe crossing once the 'Green Man' signal has finished. For some people this causes acute anxiety and we have had reports that they no longer use particular crossings. This means that people become isolated in terms of getting out and around their community. In this context KOVE supports the Living Streets' Give Us Time to Cross Campaign. Also in our discussions with older people there is strong support for the implementation of the Countdown Crossings which allows people longer time to cross and displays how long left there is to cross the road

Safely. (Please see KOVE film: 'Getting Around & Safer Road Crossings' http://www.acting-up.org.uk/kovesc.htm

KOVE feels that more work needs to be done in explaining how road crossings work - Puffin Crossing for example with sensor tracking people crossing. KOVE/Camden have produced a road safety leaflet (copy being sent to Lucy) KOVE film on our website: 'Where's The Green Man.' www.kove.org.uk

There have been specific concerns about Quex Road/Kilburn High Road Junction where there have been several serious road accidents. A filter traffic light has been suggested so that pedestrians are more aware about buses turning into Quex Road.

<u>Condition of footpath/broken and insecure paving stones</u> can greatly affect people with disabilities. Uneven surfaces for people with visual impairment and mobility problems can be treacherous making people more vulnerable to falls. (Please see our film Older Voices- getting around Kilburn high road) <u>www.kove.org.uk</u>

<u>Obstructions:</u> street furniture/ advertising boards/ stalls and goods outside, over spilling on already narrow pavements. There is a great need for de-cluttering of busy footpaths. For people with visual impairment these obstructions present a dangerous hazard. (Please see KOVE Older Voices film as above)

Lack of public seating in areas, particularly near shops. Some older people need a rest when going out. Knowing that there is an opportunity to sit down along the way gives people the incentive and motivation to go out and walk. (particularly for those with heart problems and Chronic Pulmonary disease who may become breathless). It can also give people the chance to sit and have a chat or just have a change of scene. (Please see KOVE film: Living Seats (copy sent to Lucy)

<u>Lack of public toilet facilities</u> are a major public health issue and it also greatly affects people going out. Chronic health conditions and certain medications demands a need to be near a loo. The demise of public toilets has meant that some people may not go out so much for fear of being taken short! A well publicised community toilet scheme could help and KOVE have been trying to get one established in Kilburn. In the meantime we have produced a guide to accessible toilets for customers in cafes, pubs etc. 'For Your Convenience' (copy sent to Lucy)

<u>Safer Bus Travel</u> - there are still problems with buses not pulling into the kerb for people getting on or off safely, lowering of platforms not done consistently enough for people to get on (not all physical disabilities would be obvious to a driver), bus moving off too sharply before people have got to a seat or held on to a rail,

What should be the key focus of TfL's road safety programmes?

- Safer Road crossings increase all road crossing times as per Living Street campaign.
- Installation of Count Down Crossings
- Bus Travel a) Driver training/raising awareness about importance of complying with above b) Establishing customer consultation groups at local bus garages.

What changes to the pedestrian environment would encourage people to walk more?

- Wider pavements to achieve less crowding and bustle
- Community seating
- Community toilet scheme

Examples of good and poor practice in street design for pedestrians

- KOVE work in partnership with the University of Salford who run a
 research programme on accessible travel and street design. We have
 contributed suggestions to their Design Guides which are available on their
 website: http://www.idgo.ac.uk/design_guidance/streets.htm We would
 recommend these designs are considered by the London Assembly Transport
 Committee.
- Wider pavement areas as per parts of Camden Town market
- Community Toilet Scheme as per London Borough of Richmond & Twickenham
- Community seating resting points good examples in Westminster and in some areas of Camden

KOVE acknowledges funding from Trust for London and Hampstead Wells & Campden Trust

KOVE - KILBURN SURE START GETTING AROUND & SAFER ROAD CROSSINGS

Report of Findings & Recommendations June 2008

Aims of Project:

- KOVE (Kilburn Older Voices Exchange) & Kilburn Sure Start to help improve quality of life in Kilburn & West Hampstead area by investigating what difficulties older people and parents with their young children have in negotiating road crossings and getting around safely.
- To make recommendations to the authorities over timings of Green Man crossings that will assist peoples mobility in getting around.
- To help promote road safety awareness with older people, parents and children.
- To facilitate on how to report and or complain about difficult road crossings, road hazards, bad parking, pavement obstructions etc.

Background

KOVE has consulted older people over getting around the area and they have told us about the lack of time that the 'Green Man' crossings give to pedestrians in Kilburn High Road and West End Lane and how anxious they feel in crossing the major roads. These concerns were also shared by Kilburn Sure Start parents with young children.

KOVE members carried out a survey of road crossings in Kilburn High Road and West End Lane. We identified 20 crossings and tested each of them for timing of the 'Green Man'. We also filmed some of the crossings partly to observe pedestrians road crossing behaviour (e.g. did people obey the crossing signals etc.) and to test out times with participating older people including wheelchair users. (See appendix 1)

KOVE & Kilburn Sure Start were also keen to work in partnership with authorities responsible for the crossings in this community research project. In this we enlisted the participation of KOVE network of older people, Camden Street Policy Team, Principle Service Development Officer, Camden Engineering Service, Camden Road Safety Team, Kilburn Town Centre Management, Acting Up Multimedia KOVE network of older people. (See appendix 2)

Project Plan:

- 1) Consultation with older peoples groups about road crossings. (June 2007 March 2008)
- 2) Initial community research of road crossings including film making (August November 2007)
- 3) Editing of film and consideration of findings in order to highlight recommendations and action (February to April 2008)
- 4) Presentation of findings and video film Spring 2008

Funding of project: KOVE began the project without any specific funding being identified. An application for funding from Kilburn & West Hampstead Partnership Community Chest was unsuccessful in April 2007. Limited funding for filming and facilitators time were met by KOVE. However we were successful in applying for a grant from an under spend from the Community Chest fund in March 2008. This helped to cover the costs of editing and production of video and launch of our findings in Spring 2008. KOVE acknowledges the Kilburn & West Hampstead Partnership for their financial assistance.

Approach & Methods:

KOVE members surveyed crossings and began to identify 'hot spots' where we noted the problems that pedestrians seemed to be having. A questionnaire was designed and we used this with Kilburn Sure Start parents and older peoples groups (see appendix 3). In addition KOVE has documented on video road crossings in action by testing them out with three wheelchair users, a parent with a buggy and other older people with disabilities.

Our approach and model of work is to involve members of the community. This layered approach means that we build up contact, trust and confidence of service users by including their experience and profile as a part of the project. By KOVE taking the lead, this approach appears to have been very successful - engaging people in the process, they are involved and are part of the project throughout to its conclusion.

Feedback from Older people on Getting Around & Road Crossings.

We have consulted older peoples groups and this has included contact with over 170 people about their views on road crossings (see appendix 3). They have reported unanimously that there is insufficient time allowed to cross.

In some cases this is affecting the independence of people with poor health and mobility problems causing anxiety over the shortage of time to cross, set by the road crossings authority. Older people suffering breathlessness and/or heart problems reported that this sometimes exacerbates their health condition.

Some minority community groups appear to have additional difficulties with managing road crossings. For example Somali elders have said that they are quite confused about the different types of crossings systems, inconsistency of times etc. Some Somali elders have reported that they are fearful and unconfident about getting around and in some cases it stops people going out, they would only go out with a family member, or would need to get a bus or even a taxi (which is expensive) to get around to avoid crossing busy main roads.

A selection of individual feedback about peoples experience:

[&]quot;I have to break into a trot - I feel edgy and nervous."

[&]quot;I get frightened."

[&]quot;Sometimes you can't see the green man - (vehicles hide the sign) and the sound's off."

[&]quot;Lights at junctions don't seem to be set together."

[&]quot;Waiting times seem to change at different times of the day."

[&]quot;Pedestrians too seem to have poor road safety sense."

Road Crossing Hot Spots:

<u>Sainsburys/ Brondesbury Road - Kilburn High Road:</u> Some people said that they found it difficult to cross here as it gets crowded with people and there is not enough time to cross (6 seconds). One person reported that she had to turn back half way as she was frightened.

Quex Road /Kilburn High Road Junction (9 seconds) "Cars don't always indicate that they are turning." "Some drivers feel that they have the automatic right to go when green light flashes."

<u>Belsize Road/Abbey Road Junction</u> (5 seconds) - "I feel vulnerable. There's not enough time to cross." One woman said that it was very difficult to get across when she is pushing a friend in a wheelchair.

People have reported to us that there are problems with vehicles stopping on crossings when Green Man is showing and that there should be a yellow box area to try and prevent vehicles from obstructing the crossing area.

KOVE has observed that <u>some people have a low level of road</u> <u>safety awareness and are taking risks when crossing roads</u> e.g. ignoring green man, stepping off pavement without looking, using their mobile phones when they should be concentrating on the traffic etc.

The groups that we have consulted are:

Davina House Sheltered Housing, Kingsgate African Caribbean elders, Abbey Community Centre Drop In, Kilburn Good Neighbours Scheme, Kilburn Irish pensioners, Kingsgate Sheltered Housing, Kilburn & West Hampstead Pensioners Action Association, Lauriston Lodge Sheltered Housing, Somali Cultural Centre, Spring Court Sheltered Housing, St Mary's Friendship Group, Sycamore Court Sheltered Housing, Vivian Court Sheltered Housing, KOVE steering group membership.

Summary of Findings of Survey

- KOVE community survey of 20 road crossings on Kilburn
 High Road and West End Lane discovered that the
 longest Green Man timing is 13 seconds and shortest is 5
 seconds. Current systems of Green Man road crossings
 allows insufficient time to cross for vulnerable and
 disabled people in the community.
- KOVE has made a short video film in Kilburn & West Hampstead area with older people crossing including wheelchair users. This film highlights the insufficient time allowed on crossings and also identifies poor road safety awareness by some pedestrians.
- On busy main roads we found that vehicles are often obstructing crossings for pedestrians to be able to cross safely.

- Some people are crossing roads without due care and attention and do not appear to have much road safety awareness. Vulnerable people are taking risks when crossing roads e.g. ignoring green man, stepping off pavement without looking, using their mobiles when they should be concentrating on the traffic etc.
- There appears to insufficient knowledge of how different crossings work. Pelican, Puffin etc. Also for people with poor vision and hearing loss not knowing about the rotating cone that can assist in knowing when it is safe to cross.
- The effect of the current crossings arrangements contribute to some older people losing their confidence in going out, using local shops and therefore are in danger of becoming isolated and more dependent. The recently launched Government initiative, Independent Living Strategy promotes the linking up of accessible services and facilities for people with disabilities. Positive changes such as longer pedestrian crossing times would contribute to this goal.

KOVE & Sure Start Recommendations:

- 1. Review of the current arrangements for monitoring of pedestrian crossings which are vulnerable to be blocked by vehicles. An action plan to be implemented including consideration of detection cameras, police surveillance and publicity to remind drivers that it is illegal to stop on crossings. (Transport for London, Metropolitan Police, Camden- Engineering Service, Road Safety Team, KOVE, Kilburn Sure Start)
- 2. In the longer term, consideration of a Yellow Box system (which would require new law) installed on pedestrian crossings so that similar penalties apply when drivers who enter box junctions. (Transport For London, Camden Engineering Service.)
- 3. Consideration of a pilot scheme on a 'Numbers Countdown' crossing system (as used in Denmark, Dublin, St Petersberg) so that people know how long they may have to safely cross the road. In the meantime make crossings more consistent in terms of types and publicise how they work! For example the 'blackout clearance period' period so that people can feel assured about the actual length of time that they have to safely cross the road. (Transport for London, Camden Engineers Service, Road Safety Team).

- 4. In order to raise the crossing time level to minimum 20 seconds. (our estimated average time for more vulnerable people to cross more safely) that the total 'blackout clearance period' be demonstrated and widely advertised to show that it is safe to cross, thus reassuring people that they have more time. Also at key crossings that can get very congested, particularly in busy shopping areas and where narrow pavements that longer Green Man times be considered. Implement a pilot in Kilburn & West Hampstead area and if successful roll out across Camden. (Transport For London, Camden Engineers Service, Road Safety Team).
- 5. Increase level of road safety awareness for vulnerable groups in the community including older people. People need to be made more aware about road safety obstructions and hazards eg: road works, poor lighting, badly parked cars (and how to report them). Also, tips about good road safety including: safe routes, on crossings being patient! leave enough time for your journey, take account of bad weather conditions etc. Be Seen! wear clothes that stand out. Be a good pedestrian -role models for kids etc. (Camden Road Safety Team, KOVE, Kilburn Sure Start)

Traffic Crossings Project Summer/Autumn 2007

Contact Name/Organization
Contact Number (optional)
Do you find that you have enough time when the Green Man lights up to cross safely?
If no, any specific crossings and timings that you wish to tell us about?
3. Do you have any suggestions to make crossing the road safer?

Appendix 4

Estimated timings on Green Man Crossings by KOVE (August-November 2007)

Kilburn High Road from Kilburn (Underground) Station to Maida Vale.

12 Green Man crossings (consisting of 4 at junctions, 3 at T junctions, 5 pedestrian)

Junction with Christchurch Avenue and Maygrove Road	7 seconds
Junction with Cavendish Road and Iverson Road	6 seconds
Pedestrian crossing - near Netherwood Street	7 seconds
Pedestrian crossing - near Buckley Street	8 seconds
Pedestrian crossing - near Buckley Road	8 seconds
Junction with Gascony Avenue	11 seconds
Pedestrian crossing - near Priory Park Road	9 seconds
Junction with Victoria Road and Quex Road	9 seconds
T junction crossing with Brondesbury Road	6 seconds
Pedestrian crossing near Belsize Lane	9 seconds
Pedestrian crossing near Kilburn High Road Station	6 seconds
Pedestrian crossing near Cambridge Avenue	6 seconds

West End Lane Mill Lane to Abbey Road

T junction crossing with Mill Lane

13 seconds

Pedestrian crossing near Mill Lane

7 seconds

Zebra crossing near Inglewood Road

Zebra crossing near library

Pedestrian crossing near West Hampstead Station Thames Link.8 seconds

T junction crossing with Iverson Road

8 seconds

Pedestrian crossing near West Hampstead Station Overground 5 seconds

T Junction crossing with Broadhurst Gardens

5 seconds

Remaining crossings going south along West End Lane are Zebra crossings until:

Junction crossing Abbey Road and Belsize Lane

5 seconds

London Assembly Transport Committee work on pedestrian safety – Southwark Living Streets

Southwark Living Streets would like to make the following points about pedestrians in London. At their heart they boil down to 3 main points:

- 1. How should our society and in this case London accommodate the most vulnerable group of road users?
- 2. How can we develop an urban infrastructure which a) encourages health and quality of life positives such as active transport and people spending time outside in a way that enhances their sense of community and b) discourages the negatives such as road casualties, intimidation and air pollution.
- 3) Facilitates the sustainable economic development that high spending pedestrians can bring about with advantages to their local economy.

In the last few years the chickens have come home to roost through car-centric policies in London which at their very least are now resulting in far greater road danger for pedestrians.

1. Casualties & Pedestrians

• The trend of pedestrian casualties and especially the numbers killed and seriously injured has not seen improvement in the last five years.

Pedestrian casualties in London	Killed and Seriously Injured	Slightly Injured	Total
2012	1,123	4,143	5,266
2011	980	4,466	5,466
2010	913	4,478	5,391
2009	1,055	4,154	5,209
2008	1,208	3,919	5,127

- Another very significant trend is the change in risk of serious injury away from vehicle occupants towards "vulnerable" road users (cyclists and pedestrians) and especially in this case pedestrians.
- In 2008, pedestrians made up 34% of all those killed and seriously injured on London's roads and car occupants 25%. By 2012, pedestrians made up 37% of those killed and seriously injured and car occupants 15%. Over time there has been a shift of risk away from motor vehicle occupant to vulnerable road users.
- In relation to older people, whilst those aged 60+ make up 15% of London's population, they made up 54% of all pedestrians killed and 18% of those seriously injured in 2012. It is shocking to note that pedestrians aged 60+ made up 28% of all fatalities on roads in London in 2012.
- It is important to note that pedestrian casualties are occurring on our main roads. Policies which focus on making residential roads safer will not significantly reduce pedestrian casualties. In 2012, 74% of pedestrian fatalities, 73% of serious injuries and 67% of slightly injuries occurred on the main roads (classified as A or B).
- In relation to the speed limit, there were just 2 serious injuries on 20mph roads in 2012 compared to 1,036 on 30mph roads.

Overall, therefore, we have a picture of continuing large scale casualties amongst pedestrians (when the target is one of a significant decline up to 2020) and an increasing skew in road danger towards pedestrians and especially older pedestrians.

2. Poor Pedestrian Experiences and Road Design

Casualties are not the only story of being a pedestrian in London. In addition to the casualties there is the intimidation that pedestrians experience as they are often marginalised in order to permit the free movement of vehicles. Examples of this from Southwark include:

- The Bricklayers Arms flyover where the borough is cut in two by a flyover that carries very little traffic. There is very little pedestrian movement at all in this area which before the flyover was built was a bustling town centre.
- The gyratory roads around the Elephant & Castle which allow up to 4 lanes of traffic
 moving in one direction to dominate the whole area. Again the result is very little
 pedestrian movement on roads such as St George's Rd and Westminster Bridge Rd. On
 a smaller scale, the Bellenden Rd gyratory in Peckham reduces pedestrian movement
 significantly and cuts people off from surrounding green spaces.
- Key junctions without pedestrian crossing facilities. The most obvious of these are the junctions of the south Circular Rd and Lordship Lane, the junction of Borough High Street and St Thomas Street, the eastern arm of the Borough tube station junction and the junction of BHS with Trinity St and Great Suffolk St, the junction of Tower Bridge Rd and Abbey Street and Blackfriars Rd at its junction with Stamford St/Southwark St.
- Roads which have excess capacity/a motorway type layout such as Newington Causeway, Camberwell Road (south of Wyndham Rd) and Denmark Hill.

3. Walking and Poor Health

There is too the price we are paying as a society for subordinating the needs of our children to motor traffic. While diet is also a significant issue, the lack of activity of our children reveals itself at the most basic level in the statistic that whereas across England 19.2% of all Year 6 children are identified as obese, the level is 22.5% across London and as high as 28.5% in Southwark¹.

Many people are aware that while children playing out was a common sight up until the 1970s it is extremely rare now. Initiatives such as Playing Out and temporary street closures are extremely successful at encouraging children to populate our streets and get more activity outdoors.

111

¹ http://fingertips.phe.org.uk/profile/national-child-measurement-programme/data#gid/8000011/pat/6/ati/101/page/0/par/E12000007/are/E09000002

4. Possible Approaches

The following solutions are proposed which seek to both increase levels of pedestrian road safety and encourage active travel and activity outside by children and adults – we really need to see road casualty reduction and public health improvements as linked and not silos which operate apart from each other.

- 1. Slower speeds. Slower speeds are best achieved with a combination of road design, speed limits, enforcement and (emerging) the use of vehicle technology (such as intelligent speed adaptation). Initial work should be targeted on high streets and town centres with above average casualty rates and the following tools should be used:
 - 20mph speed limits
 - Average speed cameras (set for 20mph)
 - Carriageway capacity reduction (but allowing for segregated cycle lanes on main roads)
 - Mandatory ISA on all commercial vehicles operating in London by 2020 based on the TfL digital speed map.
 - No construction vehicle to be allowed to drive at more than 20mph except on arterial roads.
- 2. Road Traffic reduction strategies (to reduce pedestrian casualties and improve air quality; motor vehicles are the most significant contributor to poor air quality).
 - The extension of congestion charging throughout the area within the north and south circular roads by 2020.
 - The introduction of a clear policy of removing permeability by motor vehicles through whole neighbourhoods to reduce the traffic impacts of vehicles and make those neighbourhoods far more favourable to walking and cycling.
 - The introduction and roll out of a freight consolidation strategy to reduce vehicle freight movements in London along the lines of the Regent Street initiative². Investigate the more widespread use of cycle deliveries.
- 3. Crossings. Introduction of fair crossings for pedestrians.
 - Set assumed walking speed to 0.8 metres / second
 - Review cycle times to remove absurdly long waiting times for green man at many crossings in London which encourage dangerous crossing behaviour.
 - Remove multi-stage crossings for pedestrians (eg former southern roundabout at the Elephant & Castle) and replace with single stage crossings.
- 4. Encouraging children to play outside.
 - Roll out of Playing Out³ to interested boroughs.
 - Removal of area-wide permeability for motor vehicles (see point 2 in 2 above).
 - Traffic reduced to movement at maximum of 20mph.
- 5. Pedestrian friendly development.
 - Major property developments to incorporate safe and convenient access by pedestrians, ensured by conditions in planning consents.
 - At least a quarter of Community Infrastructure Levies devoted to measures to help pedestrians.

² http://www.tfl.gov.uk/assets/downloads/businessandpartners/Regent-street-case-study.pdf

³ http://playingout.net/

6. Making high streets thrive.

- Work with local businesses to improve the public realm to make high streets safe and attractive, at least as inviting as people find out of town shopping malls.
- Measures to include:
 - freeing up kerb space for pedestrians to cross roads
 - avoid the air pollution at buggy-height caused by cars manoeuvring into parking spaces
 - frequent safe crossings to encourage shopping on both sides of streets
 - trees, flowers and seating
 - wide footways
 - street art by local artists
 - parklets sponsored by local businesses
 - participation in Open Streets events
 - lockers to leave purchases during long shopping sessions
 - Parking charges for out-of-town shopping centres
 - Street clutter reduction programmes removal of intrusive road signs from pavement to carriageway!

7. Road Justice

 Presumed liability with civil burden of proof reversed in collisions involving pedestrians and cyclists. Children, elderly and disabled are never held accountable for their actions/mistakes.

Southwark Living Streets – 11th December 2013

Submission to London Assembly Transport Committee from Wandsworth Living Streets

GENERAL COMMENTS

- 1. We ask the London Assembly to remind the TfL Better Junctions Review to continue and intensify building into their proposals, *elements that protect and facilitate pedestrians (and not just cyclists and drivers)*. The Better Junctions Review arose because of a recognition that junctions are especially dangerous locations, as measured by KSIs, and so need very special attention from TfL which should include a holistic, all-user, approach.
- 2. We recognise that there are many places in London which have benefitted from measures to improve walkability and the public realm more generally. Such examples will, we hope, encourage TfL officers and London Assembly members to bear in mind that there is good practice around, and that they in London have instituted many examples of good practice. What is needed is a much wider roll-out in all future changes to roads that TfL is responsible for of such pedestrian-inclusive thinking, building on precedents TfL has already often put in place in particular locations.
- 3. There is a pressing need to roll out 20mph speed limits on all TfL routes along High Streets both as a road safety measure for pedestrians and cyclists; but also as a means to enhance high streets so that pedestrians feel safer there and find them more inviting. In its thinking about TLRN on high streets, TfL needs to recognise that it has a powerful role to play in contributing to economic regeneration. This can encompass measures including simple, low-cost changes which improve pedestrian amenity and strengthen the 'place' function of high streets and town centres, such as putting in seating to encourage people to linger.
- 4. In London, pedestrians are at greatest risk when crossing the road. Being able to cross the street safely is, along with high quality pavements, *the* key element of physical infrastructure for walking. Again, TfL has a major role to play in ensuring that it is easy, quick and safe for people to cross the street, whether this be via informal crossing made easy via slower vehicle speeds; crossings located where people wish to cross; signalised crossings that don't unduly delay pedestrians or make them feel harried when crossing on the 'green man'; removal of pedestrian guardrail which so often obstructs pedestrians' desire lines; ensuring that all crossings are fully accessible; and ensuring that crossings are properly maintained.
- 5. We note from Census data that the population of the London borough of Wandsworth is growing strongly. At the same time, the percentage of households who are choosing not to own a car has increased substantially since 2001. **Wandsworth's experience** matches that across London as a whole, and **reinforces the case for improving conditions for walking, as a benign, space-efficient and healthy mode of transport**.

SPECIFIC RESPONSES TO THE LONDON ASSEMBLY'S QUESTIONS

What are the key concerns for (older, disabled) pedestrians in London?

Footways

* Narrow pavements, obstacles on pavements such as cars parked on pavements (including 'half-on, half-off' parking), poorly located street furniture and fittings, rubbish bags and

commercial advertising and encroachment

- * Poor surfaces (including icy surfaces, in winter)
- * Lack of continuity of footways at side road crossings, often even without a dropped kerb
- * Crowded narrow pavements particularly uncomfortable and difficult for older and disabled pedestrians
- * Lighting is particularly important for more vulnerable users
- * Closely parked cars can make it difficult for pedestrians to get to and from pavements, especially when encumbered
- * TfL and local authorities' resistance to the idea that parking provision for pedal cycles can be provided on the carriageway

Crossings and safety

- * Inability for informal crossing as traffic speeds often too high and too many lanes of traffic to
- * Lack of formal crossing points and poor location and quality of crossing points few and far between; long waiting times and short crossing times; not all have tactile cone
- * A number of crossings on main roads are staggered crossings that increase crossing time and distance to be covered; are inconvenient for wheelchair users and buggy pushers as require three additional right angle turns; confusing for the same reason for visually impaired users, with the added danger that the indication of the stagger is often a small raised kerb which is a trip hazard or a raised central island which gives no indication of the stagger to a visually impaired person
- * Permitted car parking close to junctions, including junctions with side streets, can make it more difficult and dangerous to cross the major road
- * Medians (raised central traffic islands) provided often have no dropped kerbs to allow a wheelchair user to use them
- * Pedestrian refuges are meanly proportioned and offer little protection for users, especially with children; in many cases, zebra crossings would provide a better facility for pedestrians
- * Some crossings are poorly drained (hence flooded after rain) which reduces their usefulness to pedestrians, who have to stand back for fear of being splashed by passing motorists suggesting that design and maintenance issues need to be addressed

What should be the key focus of TfL's road safety programmes?

- * Slower traffic speeds and volumes
- * Modal filtering of motor traffic to reduce rat runs
- * Treatment of all side road junctions to improve pedestrian priority and continuity of footway
- * Widening of footways so that pedestrians do not have to walk on the carriageway
- * Presumption against allowing 'crossovers' on footways, since these both create danger for pedestrians and degrade the walking environment
- * More frequent crossing points on desire lines that have quicker response times and longer crossing times
 - * All traffic signals to have a pedestrian phase
- * Complex junctions to be simplified to allow intuitive pedestrian movement in the shortest time and along desire lines
- * Staggered crossings to be all made straight across
- * No mixing of pedestrian and cyclists on the footway in high footfall urban centres
- * Cycling improvements should not be at the cost of pedestrians. Rather, space and time should be reallocated from motorised modes to human-powered modes. Cycle route separation from general road traffic should be permeable for pedestrians

What changes to the pedestrian environment would encourage people to walk more?

All of the above, but with further incentives to walk more and drive less, including

- * Wider footways or landscaping as replacement for car parking spaces
- * Adequate and good quality seating along routes
- * Adequate and good quality public toilet facilities
- * Good quality bus routes (including Countdown information about bus running in real time)
- * Good quality public realm with planting and green areas and street trees for shade and air pollution reduction; also public drinking water fountains (this would also reduce lorry movements)
- * Proactive working with landlords to take responsibility for greening and brightening up their buildings, to help create more interesting and pleasant streets

Examples of good and poor practice in street design for pedestrians (in London Borough of Wandsworth)

Good examples

- * Removal of pedestrian guardrailing, introduction of diagonal crossing at main crossroads, removal of slip road onto Lavender Hill associated with creation of small public space, as part of streetscape improvement scheme in Clapham Junction town centre
- * Good side-road entry treatments, including the recently installed entry treatments on side roads at St John's Road, also part of Clapham Junction streetscape scheme
- * Some modal filtering examples e.g. behind Putney Exchange, which has created a network of pleasant local streets. (But progress on modal filtering seems to have stagnated in recent years)
- * More attractive, less cluttered space around Earlsfield station and approaches on foot

Poor examples

- * Queens Circus, Battersea currently no pedestrian crossings and failure to provide safe on-road conditions for cycling mean that this is an unpleasant location to travel around on foot, which ignores the 'gateway' nature of this location both as an access point for Battersea Park and an entry point (via Chelsea Bridge) to Battersea
- * Poor conditions for pedestrians at a number of major junctions in Wandsworth main issues are multistage crossings rather than a single crossing (e.g. crossing Wandsworth High Street at jn with Buckhold Road), delays and limited time to cross. Difficulties also arise from lack of enforcement against encroachment by queueing drivers on signalised crossings. TLRN generally poor in these respects, but not unique to TfL-controlled roads; a notable example being the poor quality pedestrian crossing provision at the southern end of Putney bridge at its junction with the Lower Richmond Road

Wandsworth Living Streets
www.wandsworthlivingstreets.org
@WandsLS

December 2013

I am a deaf chair of Hammersmith and Fulham Disability Forum and the council consult us on proposals for pedestrian improvements. We have site visits with officers so am happy to share our experiences.

From the perspective of deaf pedestrians we

- look at sight lines to ensure deaf pedestrians can see traffic coming
- Do not support informal crossings near bus stops unless they are behind the bus (if they are in front of the bus the deaf person will have no warning if a motorist overtakes a stationary bus)
- Support controlled crossings and in particular countdown crossings (where the number of seconds left is recorded)
- Support the Living Street campaign for 3 extra seconds on controlled crossings. This is
 important as able bodied people can speed up if they hear cars revving up on amber and
 green whereas many disabled people may have to wait at busy crossings until others
 have left before starting to cross e.g people with assistance dogs; wheelchair users; blind
 and visually impaired people including deaf blind people
- Dislike cyclists on pavements or shared space as we cannot hear them coming.

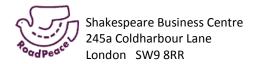

Yours sincerely

Jane Wilmot OBE
Chair
Hammersmith and Fulham Disability Forum

Causing death by driving in London (2012)

Key findings

- Over half of road deaths in London lead to a prosecution, one-third result in a conviction for causing death by driving.
- In 2012, 83 drivers were prosecuted for causing a death by driving in London.
- 49 drivers were convicted of causing a death (59% conviction rate).
- Causing Death by Careless Driving was the most common charge.
- Prison sentences were given to almost all those convicted of Causing Death by Dangerous Driving and Causing Death by Careless Driving Whilst Under Influence of drink, and to most of those convicted of Causing death by driving unlicensed, disqualified or uninsured drivers.
- Just over 1/3 of those convicted for Causing Death by Careless Driving were given a prison sentence.

Collisions and proceedings

Drivers involved in fatal collisions are not always prosecuted – they may die, they may not be responsible or there may be insufficient evidence to bring a case. The exact proportion is not publicly reported (or even recorded); estimates from combining the DfT casualty data with the MoJ court data are approximate, as the year a court case enters the statistics may differ from that of the death. Assuming there were around 146 fatal crashes, almost 60% lead to a driver being prosecuted with over a third resulting in a conviction¹.

Proceedings and convictions

The most common charge was Causing Death by Careless Driving with 36 drivers prosecuted and 18 convicted. The overall 50% conviction rate masks 100% conviction rate in Magistrates Court and only 40% conviction rate in Crown Court).

Table 1 Proceedings and Convictions, London (2012)

	Magistrates	Court	Crown Co	urt		Total	
Offence	Proceedings	Guilty	Proceedings	Guilty	Proceedings ¹	Guilty	Conviction Rate
Causing death by dangerous driving	-	-	23	15	23	15	65%
Causing death by careless driving under influence of drink or drugs	-	-	2	2	2	2	100%
Causing death by careless or inconsiderate driving	6	6	30	12	36	18	50%
Causing death by driving unlicensed, disqualified or uninsured drivers	2	-	11	9	13	9	69%
Causing death by aggravated vehicle taking	-	-	7	4	7	4	57%
Total	8	6	75	43	83	49	59%

¹ Proceedings excludes cases in Magistrates Court committed for trial in Crown Court

Feb 2014 1 RoadPeac

-

¹ The 83 court cases in 2012, were drawn from the 133 fatal crashes of that year and from the 159 of the year before.

- Of the 23 drivers prosecuted for Causing Death by Dangerous Driving, 15 drivers were convicted (65%). Some of the drivers who were acquitted of Causing Death by Dangerous Driving may have been convicted of the alternative charge of Causing Death by Careless Driving.
- Only two drivers were prosecuted for Causing Death by Careless Driving Whilst Under the Influence with both convicted.
- Of the 13 drivers prosecuted for Causing Death by Driving whilst Unlicensed, Disqualified or Uninsured, nine were convicted (69% conviction rate).

Sentencing

Overall, 29 drivers were given custodial sentences, including 14 of the 15 drivers convicted of Causing Death by Dangerous Driving and both drivers convicted of Causing Death by Careless Driving whilst under the Influence. Prison was also imposed on the majority of those convicted of For Causing Death by Driving whilst Unlicensed, Disqualified or Uninsured.

Table 2 Sentences for causing death by driving, London (2012)

	Immediate	Community		Other	
Offence	custody	sentences	Fines	disposals	Total ¹
Causing death by dangerous driving	14	-	-	1	15
Causing death by careless driving under influence					
of drink or drugs	2	-	-	-	2
Causing death by careless or inconsiderate driving	6	5	-	6	17
Causing death by driving unlicensed, disqualified					
or uninsured drivers	7	1	-	2	9
Causing death by aggravated vehicle taking	-	1	-	-	1

¹ Magistrates and Crown Courts

Table 3 Custody for Causing death by driving, London (2012)

Offence	Under 12 months	12+ to 18 months	18+ to 24 months	2+ to 3 years	3+ to 5 years	5+ years
Causing death by dangerous driving	0	0	0	2	6	4
Causing death by careless driving under influence of drink or drugs	0	0	0	0	1	1
Causing death by careless or inconsiderate driving	3	1	1	0	0	0
Causing death by driving unlicensed, disqualified or uninsured drivers	5	1	0	0	0	0
Causing death by aggravated vehicle taking	3	0	0	0	0	0
Total	11	2	1	2	7	5

Which court?

The government is currently reviewing the case mix of the court system. Both Causing death by dangerous driving and Causing death by careless driving under influence of drink or drugs <u>must</u> be heard in the Crown Court, the other three charges can be heard in either court. RoadPeace has campaigned for all fatal trials to be heard by the Crown Court as bereaved families are outraged that these cases are tried alongside petty theft cases in the Magistrates Court.

- 8 drivers were prosecuted for causing death by driving in the Magistrates Court. This included 6
 drivers prosecuted for Causing Death by Careless Driving and 2 drivers for Causing Death by Driving
 whilst Unlicensed, Disqualified or Uninsured. These are the only two causing death offences which
 can be tried in the Magistrates Courts.
- Only 3 drivers were sentenced in the Magistrates Court with the rest sent up to the Crown Court for sentencing.
- Over 95% of drivers were sentenced in the Crown Court, with most also tried there.

Since our start in 1992, RoadPeace has campaigned for all culpable road deaths to be prosecuted as manslaughter. At a minimum, they should be all tried in the Crown Court. Bereaved families understandably resent the death of their loved one being considered alongside petty crimes.

Data source

The Ministry of Justice publishes data on motoring offences at the national level, with summary data provided for each police force. As in previous years, RoadPeace submitted a Freedom of Information request for the statistics for London. Unlike in previous years, our request was denied and then our appeal rejected. The MOJ subsequently released the data in January 2014, more than six months after it was first requested.

It should be noted that the data provided by the MOJ is for counts of offences, not drivers. If a driver has caused the deaths of two people, this is shown as two prosecutions. But as it is very rare for a driver in London to kill more than one person, the data is presented by driver.

Criminal convictions and pedestrian and cyclist deaths in London July 2013

1 Introduction

The lack of linkage between collision records and criminal convictions is a well known problem and hinders transparency as well as the understanding of how often and who is being held criminally responsible for causing a collision.

Since its start, RoadPeace has called for the legal outcome of collision investigation to be monitored. And TfL has responded. The legal outcome of fatal collisions involving pedestrians and cyclists in London was reviewed in two research studies commissioned by TfL. For the pedestrian deaths study, TRL reviewed 197 fatal collision files from the total of 446 pedestrian fatal collisions that occurred in London between 2006-2010 (TRL, 2012). For cyclist deaths, TfL conducted a review of 40 cyclist deaths and 194 life changing injuries to cyclists from 2007-2010 (TfL, 2012).

The findings are summarised below.

2 Pedestrian deaths and criminal convictions

Of the 197 drivers involved, 68 were convicted of a driving offence as a result of the collision (35%). The most common charge was reported to be Careless Driving (40). The report did not differentiate between Careless Driving and Causing Death by Careless Driving. The new Causing Death by Careless Driving charge came into force during the middle of the study period but it is still possible to charge a driver with Careless Driving after a fatal crash and not hold them responsible for causing the death.

Table 1: Criminal convictions following a pedestrian death, London (2007-2010)

Fatal crashes	Pedestrian	Driver	Conviction	Careless	Dangerous	Speeding	Other
involving	deaths	convictions	rate	driving	driving		motoring
Motorcyclists	14	6	43%	2	2	2	1
Bus/coach	33	6	18%	5	1		
Speeding vehicles	31	26	84%	10	14	5	8
Alcohol impaired	46	9	20%	5		5	
pedestrians							
Pedestrians at	49	20	41%	11	8	2	8
crossings							
Pedestrians near	37	8	22%	3	1	2	3
crossings							
Pedestrians on the	12	8	67%	5	4		1
pavement							

Note: some drivers were convicted of more than one offence

As seen in Table 1, not all crashes involving speeding vehicles or even pedestrians being hit and killed on the pavement or on a crossing resulted in a conviction. No information was provided on why there was no conviction. The report also noted that vehicle speed was known in 122 of the 197 cases. It also reported that whilst most drivers were convicted of one offence (52), there were 11 drivers convicted of two offences and five drivers convicted of three or more offences.

Conviction rates varied by vehicle type. Almost half of all car and motorcycle driver/riders were convicted (43%), compared to under a fifth of HGV drivers and bus/coach drivers (18%).

Whilst the report did not provide conviction data for all pedestrian deaths, it did state that

- For the 27 pedestrian fatal crashes involving HGVs, three drivers were distracted but all were compliant with the law except for one who was speeding (pg 56).
- Amongst the 18 child pedestrian deaths, two of the vehicles failed to stop at the scene and two were travelling over the speed limit (pg. 63).
- With the 41 elderly pedestrian deaths, two drivers were speeding and two cars and two HGVs failed to stop (pg 69).

This suggests that convictions are very rare following a pedestrian death involving a child (10%), elderly person (5%) or HGV (3%). There was no discussion in the report on the implications of the lack of prosecution in cases involving law breaking or the very vulnerable (young and old pedestrians).

3 Cyclist deaths and serious injuries and criminal convictions

TfL undertook a study into the "Killed and Seriously Injured" (KSI) pedal cycle collisions and the London criminal justice system".

Table 2: London cyclist fatal collisions (2007-2009)

	fatal crashes	prosecutions	convictions	prosecution rate	conviction rate
2007	14	3	3	21%	67%
2008	13	8	2	62%	25%
2009	13	8	1	62%	13%

Source: TfL, 2012

This research provided information on prosecutions as well as convictions. For the sample of life changing cycle injury collisions, the prosecution rate was reported to have increased from 53% in 2007 to 78% in 2009 (TfL, 2012).

More information on charges and sentencings are provided in Appendix A for both the fatal and life changing injury collisions.

There was wide fluctuation in the prosecution and conviction rate of fatal collisions but this was influenced by the small numbers involved. Nor is it possible to draw any conclusions from the larger life changing injury sample as they were not a representative sample.

July 2013 RoadPeace

4 Summary

The legal outcome of fatal collisions involving pedestrians and cyclists in London was recently reviewed. This information is not regularly monitored and has been a key call for RoadPeace. In response to TfL's review of cyclist killed and seriously injured and the criminal justice system review, RoadPeace, LCC and CtC called for an annual review of the legal outcome be published. This recommendation was accepted by TfL and the Cycle Risk Working Group in spring 2012 but as of July 2013, no further data on the legal outcome of even fatal cycle collision investigations had been released.

This will not be the last time prosecution and conviction data is studied in London. TfL has proposed to conduct a review of pedestrians killed and seriously injured experience in the criminal justice system, similar to the previous cyclist study.

It is important that lessons are learned as data on the legal outcome has not been provided consistently. In the pedestrian fatal research:

- conviction data was not provided for all deaths
- no prosecution data was provided.
- criminal charges not specified correctly

Despite these data weaknesses, enough information was given to cause concern, especially for the lack of criminal prosecution following a child or elderly pedestrian death or that involving an HGV, as well as those deaths involving speeding or a pedestrian on the pavement or a crossing. Reasons for No Further Action decisions by the police should be a priority for future research studies.
