

The current London Plan (2016) requires development proposals to minimise carbon emissions and sets out the required improvement over building regulations for residential and non-domestic development in Policy 5.2

(https://www.london.gov.uk/sites/default/files/the_london_plan_2016_jan_2017_fix.pdf).

The draft London Plan ([version showing minor suggested changes 2018](#)) sets out a zero carbon target for major development which includes energy efficiency improvements over building regulations and minimum on-site carbon reduction requirements coupled with carbon offsetting for remaining emissions. Further detail is set out in Policy SI2.

Information on the implementation of the London Plan energy policies can be found in the Energy Monitoring Reports which are published annually and currently covers the period 2011 to 2017.
