The **London Assembly Environment Committee** has published the report '*Involving Londoners in the pathway to Net Zero by 2030*', highlighting key findings from the Committee's investigation into progress on the Mayor's net zero 2030 target.

Key recommendations in the report include:

- The Mayor should publish a net zero dashboard, updated at least annually, reporting progress on a set of key indicators and milestone actions to track progress on the emissions pathway to net zero by 2030.
- By October 2025, the Mayor should set out a public engagement strategy for net zero, co-ordinated with London Councils, with funding allocated to ensure that representative voices from all parts of the capital and backgrounds are heard in discussions about London's climate challenges.
- The Mayor should innovate further in public engagement approaches, and give Londoners a greater role in how money is spent through participatory budgeting.
