Table 3: Archaeological Events within 500m study area ..... 10

## Summary

An archaeological desk-top review for a site located Pigott Street, E14 7DN (the Site), in the London Borough of Tower Hamlets, has been carried out. This involved a rapid information-gathering and review of the Site and a 500m study area using information from publicly held sources.

A brief assessment of potential heritage/archaeological constraints and opportunities at the Site has been made. There are no known heritage assets located within the Site. There is a potential for unrecorded archaeological remains to be present within the Site.

This potential is based on the number of known non-designated heritage assets within the study area and located close to the Site. A total of thirty-five non-designated heritage assets are located within 500m of the Site; the closest being 123m from the Site. These range in significance from Prehistoric findspots to Medieval village settlements. The Site is not located within an Archaeological Priority Area. The closest one to Site is (APA1), Limehouse Cut. This is recognised as having high archaeological potential for remains dating to the Medieval and Post Medieval Periods.

Evidence from historic mapping indicates that the Site was part of a residential complex which remained largely unchanged between 1873 and 1938. Between 1945 and the present, the Site and the surrounding area underwent significant redevelopment likely due to bomb damage during WW2.

The designated heritage assets consist of thirty-four Listed Buildings, six Conservation Areas, three Archaeological Priority Areas, one locally listed building, and three locally listed war memorials. The Site is not located within a Conservation Area. The nearest designated heritage asset to the Site is (**LLWM1**), 115m west. Due to the location of the Site, any future development at the Site would likely not impact the setting of any designated or non-designated built heritage assets.

For any future planning application, early consultation with The Greater London Archaeological Advisory Service (GLAAS) is recommended to fully understand the requirements to submit a planning application for the Site. An archaeological desk-based assessment will likely be a minimum requirement for the Site.

# 1 INTRODUCTION

## 1.1 Background

Arcadis Consulting (UK) Limited (Arcadis) have been commissioned by the London Borough of Tower Hamlets, 'the Client', to undertake a number of technical surveys for land behind Pigott Street, E14 7DN ('the Site').

LBTH is seeking to unlock small, publicly-owned sites in the borough. This is with the aim to increase the supply of small surplus sites to market, potentially increase affordable housing availability and, at the same time, to encourage individual and community led housebuilders to take on the sites for development.

In preparation for marketing the sites to prospective purchasers (autumn 2019), LBTH is commissioning planning, legal and technical due diligence surveys. The purpose of the surveys is to enable purchasers to make robust and sensible proposals for the land in terms of both development-potential and land value. .

The objective of this archaeological desktop review is to identify potential constraints due to the presence of below ground archaeological remains and above ground heritage assets on Site.

## 1.2 Scope of Works

The scope of the appraisal is to carry out a desk-top search of publicly available information on designated and non-designated heritage assets within a study area of 500m of the Site boundary. Using this information, a brief assessment of potential heritage/archaeological constraints and opportunities at the Site has been made, focusing on key constraints. The appraisal also highlights when a Site should be subject to further detailed assessment to support a planning application for any future development.

## 1.3 Limitations

This report has been prepared for The London Borough of Tower Hamlets in accordance with the terms and conditions of appointment. Arcadis cannot accept any responsibility for any use of or reliance on the contents of this report by any third party. The copyright of this document, including the electronic format shall remain the property of Arcadis.

This report has been compiled from a number of sources, which Arcadis believes to be trustworthy. However, Arcadis is unable to guarantee the accuracy of information provided by others. The report is based on information available at the time. Consequently, there is a potential for further information to become available, which may change this report's conclusion and for which Arcadis cannot be responsible.

## 2 SITE OVERVIEW

The Site is located at NGR 537054, 181183 and covers an area of 320 square metres.

The Site is currently redundant hard standing. It is situated between Farrance Street to the north and Pigott Street to the south and west. It is enclosed by fencing. The topography of the Site is urban and has been paved with interlocking brick and contains three trees. It is relatively flat at approximately 8.0 AOD.

The Site is located on the London Clay Formation – clay, silt and sand with the sedimentary bedrock being formed approximately 48 – 56 million years ago in the Palaeogene Period (British Geological Survey Online Map Viewer, access May 2019). Superficial deposits were identified as Taplow Gravel Member (Ibid).

## 3 DATA SOURCES

Information on designated and non-designated heritage assets that are located within 500m of the Site were assessed. Designation data was derived from the National Heritage List for England on May 9, 2019. Non-designated data was received from the Greater London Historic Environment Record (GLHER) on the 10th of May 2019. Information on Conservation Areas was obtained from the Environment Data Service.

Numbers in brackets in the text are unique identifiers (Project ID. numbers) assigned to heritage assets for the purposes of this report. A list of all heritage assets including relevant archaeological events can be found in Tables 1 and 2 and 3. Nationally and Locally designated heritage assets including Archaeological Priority Areas are shown on Figure 1, Non-designated heritage assets, are shown on Figure 2 and Archaeological Events are displayed on Figure 3.

## 4 ARCHAEOLOGICAL AND HISTORICAL BACKGROUND

### 4.1 Nationally and Locally Designated Heritage Assets

There are no designated heritage assets located within the Site. Within the 500m study area, there are no World Heritage Sites or Scheduled monuments; thirty-four Listed Buildings; no Registered Parks and Gardens; six Conservation Areas; and three Archaeological Priority Areas; one locally listed building; and three locally listed war memorials.

#### Listed Buildings

There are 34 Listed Buildings within the 500m study area. The closest Listed Building to Site is 819 and 821 Commercial Road (**LB32**), 160m south west.

#### Conservation Areas

There are 6 Conservation Areas within the 500m Study Area. The closest to Site is Limehouse Cut (**CA1**), 73m north west. Due to intervening urban form, it is not currently believed impact to setting and character of (**CA1**) or the remaining five Conservation Areas will be a required consideration.

#### Archaeological Priority Areas

There are 3 Archaeological Priority Areas (APAs) within the 500m study area. The Site is not located within an Archaeological Priority Area. The closest to Site is Limehouse (**APA1**), 97m west of the Site. (**APA1**) doesn't contain much evidence of activity from the Prehistoric – Early Medieval periods. The name 'Limehouse' is first recorded in 1367 as 'le Lymostes'. The name comes from the lime kilns which had been present at Limekiln dock in 1363. Limehouse grew during this time as a riverside strip development with maritime trade-based commerce. The commercial and industrial nature of Limehouse during the Post Medieval period is well represented. Limehouse sustained considerable bomb damage WW2 and much of the Post Medieval streetscape was destroyed. (**APA1**) is recognised as containing much archaeological potential, particularly to remains from the Medieval and Post Medieval periods.

Whilst APAs do not receive statutory protection they have been identified in the Borough's Heritage Resource Document as areas where potential for below-ground archaeological remains to survive is high and where archaeological investigations are therefore likely to be required. Historic England's website provides more information about APAs and the different levels of sensitivity to development (<https://www.historicengland.org.uk/services-skills/our-planning-services/greater-london-archaeology-advisory-service/greater-london-archaeological-priority-areas/>). Historic England's website provides more information about APAs and the different levels of sensitivity to development (<https://www.historicengland.org.uk/services-skills/our-planning-services/greater-london-archaeology-advisory-service/greater-london-archaeological-priority-areas/>).

#### Locally Listed Buildings

There are 1 Locally Listed Buildings within the Study Area. This is the Road Surface on Garford Street (LLB1), 481m south.

While locally listed buildings do not receive statutory protection, they have been identified by the Borough (on their website) as having local significance for their contribution to local character and distinctiveness

([https://www.towerhamlets.gov.uk/ignl/planning\\_and\\_building\\_control/conservation\\_and\\_urban\\_design/listed\\_buildings.aspx](https://www.towerhamlets.gov.uk/ignl/planning_and_building_control/conservation_and_urban_design/listed_buildings.aspx))

#### Locally Listed War Memorials

There are 3 locally listed war memorials within the study area. The closest of which is (**LLWM1**), 118m west of the Site.

Locally listed war memorials are identified by the borough as heritage assets that are valued by the local community. While they do not receive statutory protection, it is felt by the council to be of local importance due to their historical significance.

([https://www.towerhamlets.gov.uk/ignl/planning\\_and\\_building\\_control/conservation\\_and\\_urban\\_design/listed\\_buildings.aspx](https://www.towerhamlets.gov.uk/ignl/planning_and_building_control/conservation_and_urban_design/listed_buildings.aspx))

## 4.2 Non-designated Heritage Assets

There are no non-designated heritage assets within the Site and there are twenty-seven within the 500m study area. These date from the Prehistoric to the Modern period.

There are 2 assets of Prehistoric date within the 500m study area. The closest to Site is **(6)**, 121m south. This is a findspot where a tranchent axe was found.

There are no assets within the 500m study area date to the Roman period (43AD-410).

There are no assets of Early Medieval (410-1066AD) date located within the Site or the 500m study area.

A total of 6 assets date to the Medieval (1066-1540AD) period within the 500m study area. The closest to Site is **(7, 8)** 121m south. **(7)** is the location of the Medieval village of Poplar. There is evidence of Medieval fishermen here. It expanded in the with the growth shipping industry. **(8)** is the location of a Medieval/early Post Medieval road to Hamlet & Ferry.

There are 18 assets within the 500m study area which date to the Post-Medieval period (1540-1901). The closest to Site is **(9)**, 121m south. **(9)** is the location of 19<sup>th</sup> century cellars.

There are no assets are of Modern date (1901-Modern).

There is 1 asset of Unknown date within the 500m Study Area. This is **(16)**, 284m east of the Site.

## 4.3 Historic Mapping Analysis

A brief analysis of historic mapping has been carried out. The earliest maps of the Site from 1873 shows that the Site was part of an area containing residential buildings, likely terraced housing or flats. The Site remained unchanged until 1960-1964 when the buildings within the boundary were demolished. Between 1978 – 1982 the surrounding area to the site was changed and the remaining original buildings had been demolished and redeveloped.

The London County Council Bomb Damage Maps 1939 – 1945 indicate that the Site experienced minor to major bomb damage during WW2. The 500m Study Area was subject to heavy damage from V2 rockets. There remains a possibility for unexploded ordnance to be present below ground and for archaeological remains to have been disturbed, if present.

## 4.4 Previous Archaeological Events

There are twelve previous archaeological events/investigations recorded within the 500m study area. None of these events are located within the Site itself. Only those intrusive investigations are discussed below, however all events are in table 3 and figure 2.

A number of archaeological evaluations and excavations have occurred across the study area. These have identified a range of finds and features of archaeological interest.

Archaeological investigations (**EV2, EV8, EV9, EV10, EV11**) revealed material relating to the 19th century. (**EV12**) revealed a range of material dating to the Prehistoric, Medieval and Post Medieval periods. The geotechnical surveys (**EV3, EV5, EV6, EV7**) confirmed that made-ground of unknown date was evident up to depths of 4.20m below ground.

The closest intrusive archaeological event to the Site was (**EV12**), 147m west.

Table 1: Nationally and Locally Designated Heritage Assets within the 500m study area.

## 5 KEY CONSTRAINTS AND RISKS

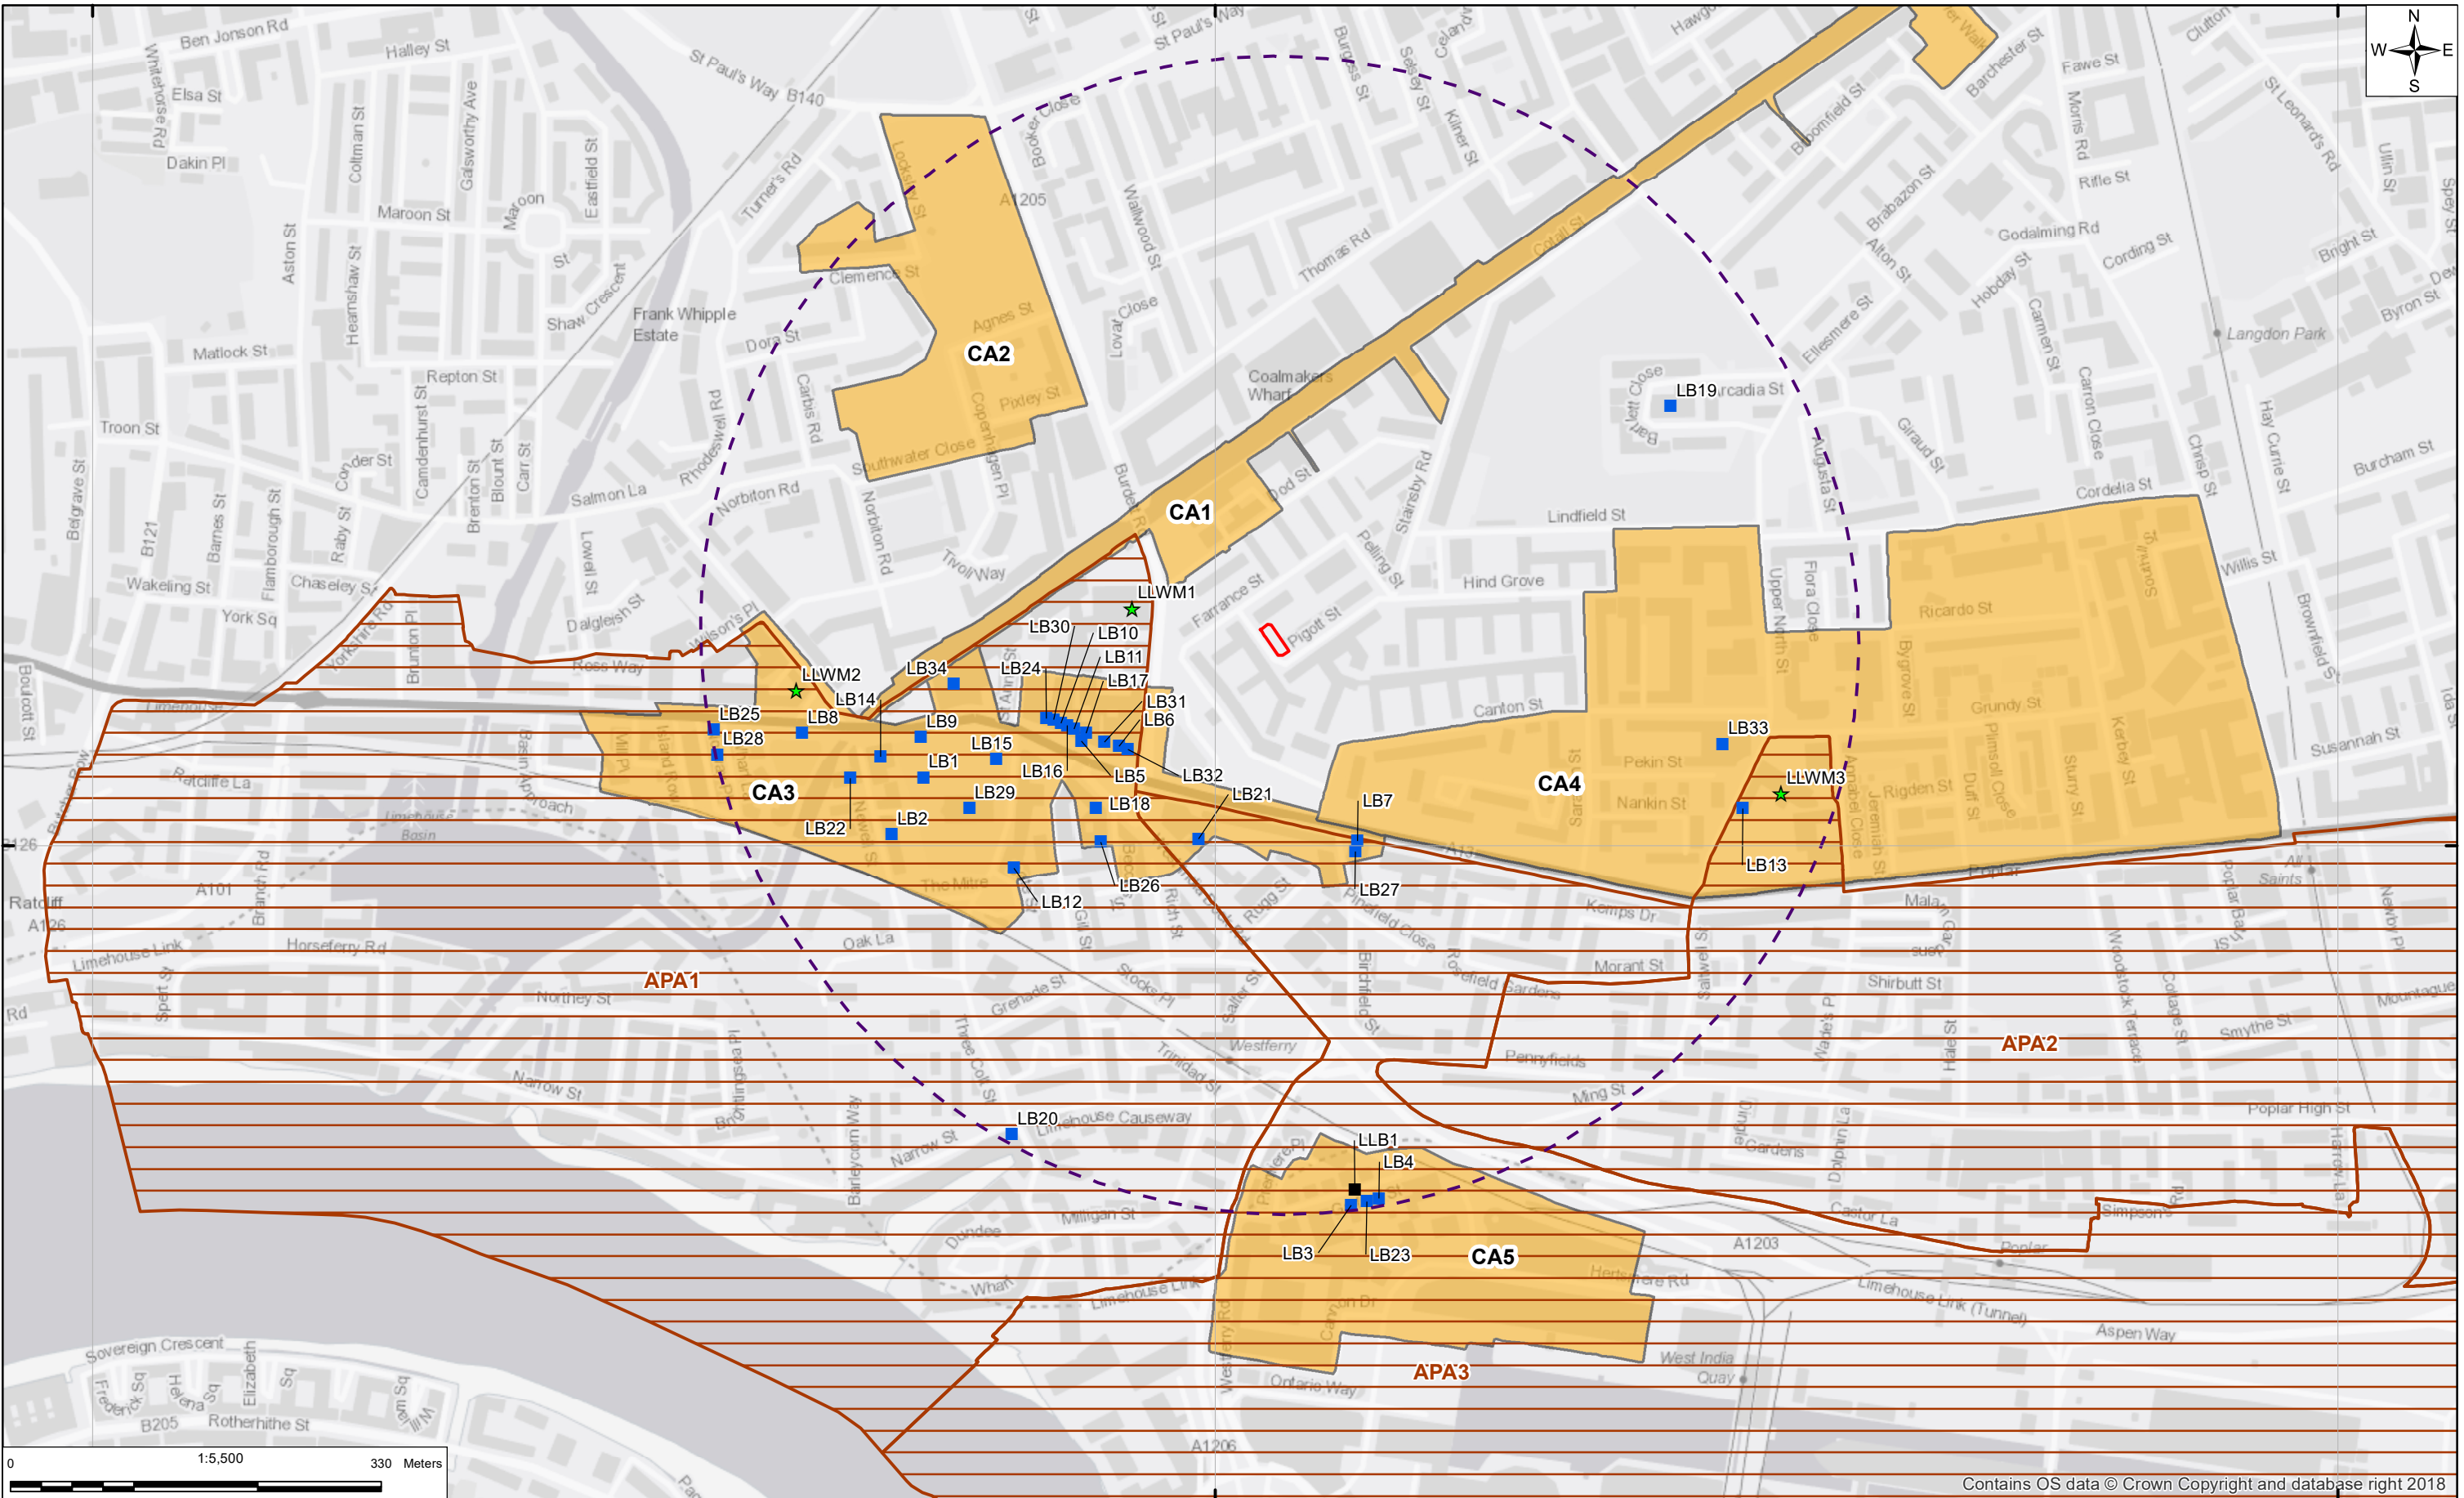

The potential for buried archaeological remains to survive at the Site can only be borne out through detailed assessment and archaeological investigation. Based on the current understanding of the Site, there is potential that deposits of archaeological interest may be located within the Site.

This potential is based on the range of known archaeological assets within the 500m study area as well as the degree of development within the Site itself. Excavations within the study area have established a range of evidence for human occupation from the Prehistoric to the Modern periods. They also revealed made ground of unknown date throughout the study area at significant depths. The demolition of the buildings on Site will have affected below ground archaeological remains of a certain depth. These factors reduce the likelihood of any being present on Site, however archaeological potential cannot entirely be ruled out. Given that the Site is only 73m away from (APA1) which has a high potential for archaeological remains from the Medieval to Post-Medieval periods, the possibility for them to be present on Site is heightened.

The location of the Site within a modern housing estate, indicates that any future proposed development of the Site is not likely to impact on the setting or character of any nearby designated or built non-designated heritage assets.

## 6 RECOMMENDATIONS

It is recommended that consultation with Greater London Archaeological Advisory Service (GLAAS) is undertaken at the earliest opportunity to understand the likely requirements of planning submission for the Site. It is anticipated that GLAAS will ask for a full archaeological desk-based assessment, to fully assess the archaeological potential of the Site. GLAAS may also request a archaeological trial trenching to assess the presence and or absence of archaeological deposits, as part of the developed understanding of the Site's archaeological potential. It is advised that the Conservation Officer for the Council be contacted regarding the Conservation Area.
