As CHP specialists and the only low NOx CHP manufacturers in the UK, with our improved and proven range of CHP engines, we are able to achieve levels of less than 50mg/Nm³ @ 5% O₂ that are sustained across the lifetime of the emissions system of its new CHP range. This is almost half of the most stringent emissions limit set by both BREEAM and the new Greater London Authority (GLA) within the Sustainable Design and Construction guidelines (95mg/Nm³ @ 5% O₂). It is five times lower than the more widely accepted limit of 250mg/Nm³ @ 5% O₂.
