Note for Chapter 9. Sustainable infrastructure.

Policy SI15 water transport.

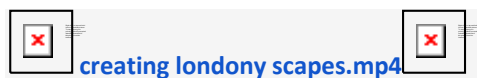

Policy SI16 waterways.

Dear sirs!

As architect and citizen of Saint-Petersburg Russia, one of most beautiful cities in Europe, which is located on the number of islands, surrounded by canals and rivers, I want to encourage the development of water public and tourist transport as it is appointed in a strategy of spatial development of London.

Development of water transport combined with active engagement of former industrial areas with their canals and rivers is to deliver the new kind of water public spaces inside new commercial, residential or mixed-use developments which can present alternatives to traditional public parks and squares. As an example please find attached the concept for this kind of public space for regeneration of Fulham gasholder in London Borough of Hammersmith and Fulham which was proposed by my team in beginning of 2017 or see the link below.
