Page: [Policy H6 Threshold approach to applications](#)

Section: [H6](#)

By setting affordable threshold to 50% for public land will encourage Local Authorities and other public land holders to sell the land to private developers to get a better return on the asset. Often land is sold by these bodies to raise capital for other capital projects and selling the land on the open market will deliver a higher land value given a private buyer/developer will base its offer on 35% affordable.
