

## ***London Plan Examination in Public: Agenda and Participants***

**9.30am Friday 29 March 2019**

**Sustainable infrastructure – greenhouse emissions, energy system and managing heat risk [M67]**

### **Agenda**

#### **Panel's Opening Announcements**

M67. Would Policies SI2, SI3 and SI4 assist in creating a healthy city in accordance with Policy GG3 and provide an effective strategic context for the preparation of local plans and neighbourhood plans? How would they affect the implementation of Policies GG4 and GG5 on delivering the homes Londoners need and growing a good economy? Are these policies and their detailed criteria justified and necessary and would they provide an effective basis for development management?

- a) In seeking to minimise greenhouse gas emissions does Policy SI2 provide sufficient clarity about the zero-carbon target and how and when it is to be achieved? Is the target justified and consistent with national policy? Are all the criteria and supporting text necessary?
- b) How are unregulated emissions and whole life-cycle carbon at Policy SI2 DA and DB to be calculated and is this justified?
- c) Are the provisions in Policy SI3 relating to energy masterplans and major development proposals within Heat Network Priority Areas justified? Is the sequence and content of the heating hierarchy justified having regard, amongst other things, to greenhouse gas emissions?
- d) Would Policy SI4 adequately address overall thermal comfort?
